1984 events in history: [The Dynamics of Ethnic Competition and Conflict](#) Susan Olzak, 1994-07-01 This study of ethnic violence in the United States from 1877 to 1914 reveals that not all ethnic groups were equally likely to be victims of violence; the author seeks the reasons for this historical record. This analysis of the causes of urban racial and ethnic strife in large American cities at the turn of the century should comprise important empirical and theoretical reference material for social scientists and historians alike.

1984 events in history: [Max Weber's Comparative-Historical Sociology](#) Stephen Kalberg, 1994-03-17 The revival of historical sociology in recent decades has largely neglected the contributions of Max Weber. Yet Weber's writings offer a fundamental resource for analyzing problems of comparative historical development. Stephen Kalberg rejects the view that Weber's historical writings consist of an ambiguous mixture of fragmented ideal types on the one hand and the charting of vast processes of rationalization and bureaucracy on the other. On the contrary, Weber's substantive work offers a coherent and distinctive model for comparative analysis. A reconstruction of Weber's comparative historical method, Kalberg argues, uncovers a sophisticated outlook that addresses problems of agency and structure, multiple causation, and institutional interpretation. Kalberg shows how such a representation of Weber's work casts a direct light upon issues of pressing importance in comparative historical studies today. Weber addresses in a forceful way the whole range of issues confronted by the comparative historical enterprise. Once the full analytical and empirical power of Weber's historical writings becomes clear, Weber's work can be seen to generate procedures and strategies appropriate to the study of present day as well as past social processes. Written in an accessible and engaging fashion, this book will appeal to students and professionals in the areas of sociology, anthropology, and comparative history.

1984 events in history: Decision Making in Behavioral Strategy T. K. Das, 2016-11-01

Behavioral strategy continues to attract increasing research interest within the broader field of strategic management. Research in behavioral strategy has clear scope for development in tandem with such traditional streams of strategy research that involve economics, markets, resources, and technology. The key roles of psychology, organizational behavior, and behavioral decision making in the theory and practice of strategy have yet to be comprehensively grasped. Given that strategic thinking and strategic decision making are importantly concerned with human cognition, human decisions, and human behavior, it makes eminent sense to bring some balance in the strategy field by complementing the extant emphasis on the "objective" economics-based view with substantive attention to the "subjective" individual-oriented perspective. This calls for more focused inquiries into the role and nature of the individual strategy actors, and their cognitions and behaviors, in the strategy research enterprise. For the purposes of this book series, behavioral strategy would be broadly construed as covering all aspects of the role of the strategy maker in the entire strategy field. The scholarship relating to behavioral strategy is widely believed to be dispersed in diverse literatures. These existing contributions that relate to behavioral strategy within the overall field of strategy has been known and perhaps valued by most scholars all along, but were not adequately appreciated or brought together as a coherent sub-field or as a distinct perspective of strategy. This book series on Research in Behavioral Strategy will cover the essential progress made thus far in this admittedly fragmented literature and elaborate upon fruitful streams of scholarship. More importantly, the book series will focus on providing a robust and comprehensive forum for the growing scholarship in behavioral strategy. In particular, the volumes in the series will cover new views of interdisciplinary theoretical frameworks and models (dealing with all behavioral aspects), significant practical problems of strategy formulation, implementation, and evaluation, and emerging areas of inquiry. The series will also include comprehensive empirical studies of selected segments of business, economic, industrial, government, and non-profit activities with potential for wider application of behavioral strategy. Through the ongoing release of focused topical titles, this book series will seek to disseminate theoretical insights and practical management information that will enable interested professionals to gain a rigorous and comprehensive understanding of the subject of behavioral strategy. *Decision Making in Behavioral Strategy* contains contributions by leading scholars in the field of behavioral strategy research. The 10 chapters in this volume cover a number of significant issues relating to the decision making processes, practices, and perspectives in the field of behavioral strategy, covering diverse topics such as failures in acquisitions, entrepreneurs under ambiguity, metacognition, neural correlates of emotion, knowledge flows, behavioral responses, business modeling, and alliance capability. The chapters include empirical as well as conceptual treatments of the selected topics, and collectively present a wide-ranging review of the noteworthy research perspectives on decision making in behavioral strategy.

1984 events in history: Longitudinal Research with Latent Variables Kees van Montfort, Johan H.L. Oud, Albert Satorra, 2010-05-17 Since Charles Spearman published his seminal paper on factor analysis in 1904 and Karl Joreskog replaced the observed variables in an econometric structural equation model by latent factors in 1970, causal modelling by means of latent variables has become the standard in the social and behavioural sciences. Indeed, the central variables that social and behavioural theories deal with, can hardly ever be identified as observed variables. Statistical modelling has to take account of measurement errors and invalidities in the observed variables and so address the underlying latent variables. Moreover, during the past decades it has been widely agreed on that serious causal modelling should be based on longitudinal data. It is especially in the field of longitudinal research and analysis, including panel research, that progress has been made in recent years. Many comprehensive panel data sets as, for example, on human development and voting behaviour have become available for analysis. The number of publications based on longitudinal data has increased immensely. Papers with causal claims based on cross-sectional data only experience rejection just for that reason.

1984 events in history: Handbook of Data Analysis Melissa A Hardy, Alan Bryman, 2009-06-17

A fundamental book for social researchers. It provides a first-class, reliable guide to the basic issues in data analysis. Scholars and students can turn to it for teaching and applied needs with confidence.

1984 events in history: Handbook of Longitudinal Research Scott Menard, 2007-10-11

Longitudinal research is a broad field in which substantial advances have been made over the past decade. Unlike many of the existing books that only address the analysis of information. The Handbook of Longitudinal Research covers design and measurement as well as the data analysis. Designed for use by a wide-ranging audience, this Handbook not only includes perspective on the methodological and data analysis problems in longitudinal research but it also includes contributors' data sets that enable readers who lack sophisticated statistics skills to move from theories about longitudinal data into practice. As the comprehensive reference, this Handbook has no direct competition as most books in this subject area are more narrowly specialized and are pitched at a high mathematical level. Contributors and subject areas are interdisciplinary to reach the broadest possible audience (i.e., psychology, epidemiology, and economics research fields) Summary material will be included for less sophisticated readers Extensive coverage is provided of traditional advanced topics

1984 events in history: The Reemergence of Self-Employment Richard Arum, Walter Müller, 2009-01-10 This book presents results of a cross-national research project on self-employment in eleven advanced economies and demonstrates how and why the practice is reemerging in modern societies. While traditional forms of self-employment, such as skilled crafts work and shop keeping, are in decline, they are being replaced by self-employment in both professional and unskilled occupations. Differences in self-employment across societies depend on the extent to which labor markets are regulated and the degree to which intergenerational family relationships are a primary factor structuring social organization. For each of the eleven countries analyzed, the book highlights the extent to which social background, educational attainment, work history, family status, and gender affect the likelihood that an individual will enter--and continue--a particular type of self-employment. While involvement with self-employment is becoming more common, it is occurring for individuals in activities that are more diverse, unstable and transitory than in years past.

1984 events in history: Applied Panel Data Analysis for Economic and Social Surveys

Hans-Jürgen Andreß, Katrin Golsch, Alexander W. Schmidt, 2013-01-24 Many economic and social surveys are designed as panel studies, which provide important data for describing social changes and testing causal relations between social phenomena. This textbook shows how to manage, describe, and model these kinds of data. It presents models for continuous and categorical dependent variables, focusing either on the level of these variables at different points in time or on their change over time. It covers fixed and random effects models, models for change scores and event history models. All statistical methods are explained in an application-centered style using research examples from scholarly journals, which can be replicated by the reader through data provided on the accompanying website. As all models are compared to each other, it provides valuable assistance with choosing the right model in applied research. The textbook is directed at master and doctoral students as well as applied researchers in the social sciences, psychology, business administration and economics. Readers should be familiar with linear regression and have a good understanding of ordinary least squares estimation.

1984 events in history: Neverending Wars Ann Hironaka, 2009-07 Since 1945, the average length of civil wars has increased three-fold. What can explain this startling fact? It can't be ethnic hatreds and injustices - these have been around for centuries. In Neverending Wars, Ann Hironaka points to the crucial role of the international community in propping up many new and weak states that resulted from the decolonization movement after World War II. These impoverished states are prone to conflicts and lack the necessary resources to resolve them decisively. International aid and external military intervention from the international community often perpetuate such conflicts. And the Cold War further exacerbated the problem by providing large amounts of military aid. The continual infusion of weapons and resources can prolong such wars indefinitely. This timely book will provide an entirely new way to look at recent, vicious civil wars, failed states, and the terrorist

movements that emerge in their wake.

1984 events in history: Sequence Analysis and Related Approaches Gilbert Ritschard, Matthias Studer, 2018-10-17 This open access book provides innovative methods and original applications of sequence analysis (SA) and related methods for analysing longitudinal data describing life trajectories such as professional careers, family paths, the succession of health statuses, or the time use. The applications as well as the methodological contributions proposed in this book pay special attention to the combined use of SA and other methods for longitudinal data such as event history analysis, Markov modelling, and sequence network. The methodological contributions in this book include among others original propositions for measuring the precarity of work trajectories, Markov-based methods for clustering sequences, fuzzy and monothetic clustering of sequences, network-based SA, joint use of SA and hidden Markov models, and of SA and survival models. The applications cover the comparison of gendered occupational trajectories in Germany, the study of the changes in women market participation in Denmark, the study of typical day of dual-earner couples in Italy, of mobility patterns in Togo, of internet addiction in Switzerland, and of the quality of employment career after a first unemployment spell. As such this book provides a wealth of information for social scientists interested in quantitative life course analysis, and all those working in sociology, demography, economics, health, psychology, social policy, and statistics.

1984 events in history: Aging and Time Henk Visser, Jan Baars, 2020-11-25 The aim of this volume is to revitalise the debate about the concepts of time implicit in the study of aging. The many problems related to aging and the aged put an enormous pressure on the gerontological community to come up with practical applications and solutions. In considering research findings, we must keep in mind the basic assumptions that shape and influence even the most obvious statements about aging. In this multidisciplinary volume, the contributors take on the important task of exploring real issues concerning temporal concepts and approaches to aging; and the concepts of time that are used in thinking about aging determine to a large extent the way aging is approached. Most studies of aging still use a chronological approach to define populations for research purposes (that is, to determine which aged should be studied) and to establish how people's characteristics (social, economic, health and so forth) change as a function of age. This approach may lead to an accumulation of data, but does not in itself lead to explanatory knowledge. The step from chronological time to chronological age should be taken cautiously if we want to consider aging processes seriously, especially because chronological age is widely used in contemporary societies as a basis for regulating all kinds of processes, with many consequences for individuals. The arguments presented here do not deny the finitude of human life, nor do they deny that aging can be observed in any individual if we compare the characteristics of that person over a relatively long period. The question is how to approach these themes to get a better understanding. To achieve this, we need to understand the specific significance and relativity of chronological time and uncover unfounded deductions about time in relation to aging. This book will be of interested to students and professors of the social sciences, humanities and aging, including the methodology of aging studies; professionals working in the field of aging, including sociologists, psychologists and biologists.

1984 events in history: Applied Longitudinal Data Analysis Judith D. Singer, John B. Willett, 2003-03-27 Change is constant in everyday life. Infants crawl and then walk, children learn to read and write, teenagers mature in myriad ways, the elderly become frail and forgetful. Beyond these natural processes and events, external forces and interventions instigate and disrupt change: test scores may rise after a coaching course, drug abusers may remain abstinent after residential treatment. By charting changes over time and investigating whether and when events occur, researchers reveal the temporal rhythms of our lives. *Applied Longitudinal Data Analysis* is a much-needed professional book for empirical researchers and graduate students in the behavioral, social, and biomedical sciences. It offers the first accessible in-depth presentation of two of today's most popular statistical methods: multilevel models for individual change and hazard/survival models for event occurrence (in both discrete- and continuous-time). Using clear, concise prose and real data sets from published studies, the authors take you step by step through complete analyses,

from simple exploratory displays that reveal underlying patterns through sophisticated specifications of complex statistical models. Applied Longitudinal Data Analysis offers readers a private consultation session with internationally recognized experts and represents a unique contribution to the literature on quantitative empirical methods. 1984 events in history: Evolutionary Dynamics of Organizations Joel A. C. Baum, Jitendra V. Singh, 1994 His text presents the latest research and theory about evolutionary change in organizations. It brings together the work of organizational theorists who have challenged the orthodox adaptation views that prevailed until the beginning of the 1980s. It emphasizes multiple levels of change distinguishing change at the intraorganizational level, the organizational level, the population level, and the community level. The book is organized in a way intended to give order and coherence to what has been a diverse and multidisciplinary field. (The book had its inception at a conference held at the Stern School of Business, New York University, January 1992.).

1984 events in history: Teen Mothers and the Revolving Welfare Door Kathleen Mullan Harris, 1997 Kathleen Mullan Harris reveals the relationship between black teenage mothers and the welfare system. Does welfare encourage them to maintain a life of dependency? How does education, marriage, and employment impact this relationship? How do these women escape dependency? Harris's account is based on Frank Furstenberg's Baltimore study, which began in the 1960s and has continued for more than 20 years. This study traces the paths of these mothers and provides commentary on the changes in the welfare system and the way society perceives welfare recipients. Not only are job prospects worse today but so are welfare benefits, and the abortion rate has risen drastically.
