1995 science fiction movies: *Women Scientists in Fifties Science Fiction Films* Bonnie Noonan, 2005-06-01 In the 1950s, science was rapidly advancing, and so were scientific opportunities for women. Modern science fiction films reflected these simultaneous social developments. This book proposes that the social ideology of the 1950s, which was partly concerned with gender issues, saturated the B science fiction films of that era and inspired a new appreciation for the role of women in scientific advancements and other social achievements. Drawing on feminist literary and cultural theory, the author argues that the emergence of the modern American science fiction film in 1950 and the situation of post-World War II female scientists together created a film genre. That genre was explicitly amenable to exploring the tension between a woman's place in her home and her place in the work force, particularly in scientific fields. Early chapters provide a general introduction to the science fiction genre and specifically describe 1950s B science fiction films as they resonate with concerns proper to feminist theory. Subsequent chapters offer detailed, historically situated readings of 10 B science fiction films from the 1950s that feature women in science. The cinematic representations of female scientists are compared and contrasted with real female professionals of the time, illuminating the changing gender dynamics reflected in popular film in the 1950s. Films analyzed include *Rocketship X-M*, *It Came from Beneath the Sea*, *Them!*, *Tarantula*, *The Deadly Mantis*, *Beginning of the End*, *Kronos*, *Cat-Women of the Moon*, *World Without End*, and *Queen of Outer Space*.

1995 science fiction movies: The Art of Movies Nicolae Sfetcu, 2014-05-06 Movie is considered to be an important art form; films entertain, educate, enlighten and inspire audiences. The origin of the name comes from the fact that photographic film (also called filmstock) has historically been the primary medium for recording and displaying motion pictures. Many other terms exist — motion pictures (or just pictures or picture), the silver screen, photoplays, the cinema, picture shows, flicks — and commonly movies.

1995 science fiction movies: Columbia Pictures Horror, Science Fiction and Fantasy Films, 1928-1982 Michael R. Pitts, 2014-01-10 From 1928 through 1982, when Columbia Pictures Corporation was a traded stock company, the studio released some of the most famous and popular films dealing with horror, science fiction and fantasy. This volume covers more than 200 Columbia feature films within these genres, among them *Close Encounters of the Third Kind*, *The 7th Voyage of Sinbad*, *Earth vs. the Flying Saucers* and *The Revenge of Frankenstein*. Also discussed in depth are the vehicles of such horror icons as Boris Karloff, Bela Lugosi, and John Carradine. Additionally highlighted are several of Columbia's lesser known genre efforts, including the *Boston Blackie* and *Crime Doctor* series, such individual features as *By Whose Hand?*, *Cry of the Werewolf*, *Devil Goddess*, *Terror of the Tongs* and *The Creeping Flesh*, and dozens of the studio's short subjects, serials and made-for-television movies.

1995 science fiction movies: Louis and Bebe Barron's Forbidden Planet James Wierzbicki, 2005-06-30 *Forbidden Planet* is a product of the MGM studio, which at the time of the production of this film was hardly in the business of making science-fiction films. Originally planned as a B picture, the 1956 *Forbidden Planet* was praised for its spectacular special effects and brilliant color cinematography. The plot practically tingles with sexual innuendo and the dialogue is rich in references to Freudian psychology. However, in spite of all this, the film was marketed to a juvenile audience. Notwithstanding its uncommon look and feel, perhaps the most unusual aspect of the film is the way it sounds. Never before had a major Hollywood effort utilized a score generated entirely by electronic means, yet seldom does one find commentary on how Louis and Bebe Barron's score again and again challenges Hollywood norms. In addition to placing the composers and film in historical context, James Wierzbicki's study offers a deep and thorough analysis of not only the

music as used in the film, but also of the decontextualized music as presented by the Barrons on the 1977 original soundtrack album. The text is generously illustrated with transcriptions and graphs, and can serve as a model for the examination of other extended works of electronic music for which no written score has ever existed.

1995 science fiction movies: *Triumph of a Time Lord* Matt Hills, 2010-01-30 Before Saturday March 26th 2005, Doctor Who had been off the air as a regular, new TV series for more than fifteen years; until a production team led by Russell T. Davies re-imagined the programme so successfully, so triumphantly, that it's become an instant Christmas tradition, a BAFTA winner, an international 'superbrand' and a number one rated show. It's even been credited with reinventing family TV. This is the first full-length book to explore the 'new Who' phenomenon through to the casting of Matt Smith as the new Doctor. It explores Doctor Who through contemporary debates in TV Studies about quality TV and how can we define TV series as both 'cult' and 'mainstream'. Further, the book challenges assumptions in focusing on the importance of breath-taking, dramatic moments along with narrative structures, and in analysing the significance of Murray Gold's music as well as the series' visual representations. Matt Hills is a lifelong Who fan and he also considers the role of fandom in the show's return. He investigates too the multi-generic identity, the monster-led format, and the time-travelling brand of BBC Wales' 'Doctor Who'. In the twenty-first century, TV is changing, but the last of the Time Lords has been more than ready: he's been fantastic.
