bell trace health and living: *In Search of Meaning and Purpose Through Living, Structure and Function* Edy P. Pierre, 2012-05-09 Is a story about the humanity living with a natural mind that possess by endless needs, wants and desires. The book explains how we become so intimately connected with life through our mind and by which we are conscious of all of life's pain, suffering and disappointments it brings. In the process, we become a problem-oriented world as we individually intertwine with a time perception world, construed with the notion of future, opportunities and hope for better tomorrows. As our living continue to revolve around our desires and perceptions, the least of all the choices we will make or want is to become free from fear, free from pain and sufferings and pursuit unhappiness. Fear that if we are not happy, this will mean we have lost ourselves in emptiness and eventually become hopeless. To be hopeful, is to feeding the never ending desire for a better future from the past. In clear, straightforward language, complemented by well-designed mental functioning desire for peace, love, joy and happiness every aspect of this integrative is systematically address the perception that life will get better. From strategies, to family conveys this powerful message of empathy, hope for individuals struggling with ongoing persistent to keep on working as a manager of time to facilitate history of endless expectation. All of us enthralled in this behavior, even with obsession trying to reverse what is perceived negative relationships life and time. Yet, history indicates that the very aspect of empathic is not hopeful beginning or ending, all that does it to continuous integrating toxic relationships while promoting positive attitude toward an unsuccessful outcome. Richard Hooker (1554? - 1600) English theologian, once say, "Change is not made without inconvenience, even from worse to better". Also another historian Alvin Toffler a U.S. writer (1928 -) once says, "Even the best strategies seldom take into account more than a few of the consequences that flow from them. The book went on to explain how the appearance that time and the human mind are seemingly inseparable, but biologically speaking that is not entirely conclusive. Nonetheless, as far as being aware of existence is concerned, this is one of the inter-social complexities. This tragic interactive relation is evident in many different aspects for every person living today. While progressive technology has provided the contemporary world with countless time-saving devices and options to managing our time, most people complain and suffering with anxiety about not having enough time to do all the things they want or have to do.

bell trace health and living: *Living Proof* Michael Gearin-Tosh, 2010-05-11 I was told I had cancer and that I must expect to die soon. Almost eight years later I still do my job and enjoy life. I

have not had conventional treatment. Did my cancer simply disappear? Did I do nothing? Far from it. A number of things happened, some by accident, most by design. Michael Gearin-Tosh is diagnosed with cancer at the age of fifty-four. The doctors urge immediate treatment. He refuses. Intuitively, not on the basis of reason. But as the days pass, Gearin-Tosh falls back on his habits as a scholar of literature. He begins to probe the experts' words and the meaning behind medical phrases. He tries to relate what each doctor says -- and does not say -- to the doctor's own temperament. And the more questions he asks, the more adamant his refusal to be hurried to treatment. The delay is a high-risk gamble. He listens to much advice, especially that of three women friends, each with a different point of view, one a doctor. They challenge him. They challenge medical advice. They challenge one another. On no occasion do they speak with one voice. He also turns to unexpected guides within his own memory and in the authors he loves, from Shakespeare and Chekhov to Jean Renoir, Arthur Miller, and Václav Havel. In the end, he chooses not to have chemotherapy but to combat his cancer largely through nutrition, vitamin supplements, an ancient Chinese breathing exercise with imaginative visualizations, and acupuncture. No how-to book or prescriptive health guide, *Living Proof* is a celebration of human existence and friendship, a story of how a man steers through conflicting advice, between depression and seemingly inescapable rationalism, between the medicine he rejects and the doctors he honors. Clear-eyed and unflinching, Gearin-Tosh even includes his own medical history, *The Case of the .005% Survivor*; explores general questions about cancer; and examines the role of individual temperament on medical attitudes, the choice of treatments, and, of course, survival.
