believe in science nacho libre: Living Under Water Kevin J. Adams, 2022-01-25 Our truest identity isn't something we create or build ourselves. It's a gift we receive. We live under water. What does baptism mean? And what do we do with it? Kevin Adams—an experienced pastor and church planter who has baptized people of all ages and spiritual origins—makes the case that baptism isn't merely a one-time ceremony but something to be lived and affirmed throughout one's life. In *Living under Water*, Adams shares stories that illustrate how baptism shapes one's identity and enters us into an alternate narrative, one ongoing since the dawn of creation, through which we understand our truest selves with all our joy and trauma and by which we are united with a group of people unbound by race or language, continent or generation. Foregrounding baptism in the lives of Christians means foregrounding baptism in the life of the church. Anchored in both theology and real-world experience, Adams shows how that can happen while engaging honestly with the history (and ongoing reality) of baptism's corruptions and abuses. This book is for pastors and parishioners of any Christian tradition who long for baptism to be bigger than a set of doctrinal bullet points—nothing less than the gospel story enacted with water.

believe in science nacho libre: What Kind Of Game Is This? Can Anyone Play? Jesus Briones, 2024-04-03 In this book, the author Jesus Briones focuses on the fragility of our psychological ecosystem--a fancy way of saying we are constantly changing and never know exactly what we are becoming. His writing is direct and organic, no fillers or artificial flavors, like folk medicine. He stresses the importance of avoiding false values and appreciating life's simple and unadorned truths. Not dark or gloomy, his message is timely and optimistic, but with provisos. While the world may measure the value of a man by the number of zeroes in his bank account, Mr Briones offers another take on what makes people worth knowing and staying connected to throughout the inevitably unpredictable course of life. His worldview has been shaped by a life spent among all types of people. He was born in 1940 and grew up in rural Mexico. Orphaned at a young age, he worked at a variety of jobs in Mexico and then Arizona, where he is now a builder/contractor. In the process, he came to refine what it means to be a winner. Success has taught him that winning is not about who has the most points or the most money. For him, life is about accumulating experiences that forge your character and make you the person you were meant to be, something that is often apparent from a young age, as it was in his case. Mr Briones was born on Christmas more than eight decades ago, and he continues to go to work every day and build character, along with fine homes.

young Catholic why they are walking away from the Church and one of the main reasons is usually a perceived conflict between science and Christianity. The student edition of *Particles of Faith: A Catholic Guide to Navigating Science* aims to help Catholic high school students find real answers to real questions about the interaction of science and faith. What is the origin of life? Does the Big Bang prove God? Can a Christian accept the theory of evolution? Teacher and scientist Dr. Stacy A. Trasancos—who converted to Catholicism while confronting similar concerns about science and faith—addresses these and many other probing questions in the student edition of *Particles of Faith*, a book designed for use in a high school theology or science course. At the end of the book, students will be able to not only answer key questions about the faith but also to explain those answers to others. The *Particles of Faith* Teacher Resource Guide can be found online in the Classroom Resource section of the Ave Maria Press website and helps teachers adapt the book's material as a separate unit in regularly-scheduled courses such as morality, social justice, life science, or in chemistry and physics courses. Lesson plans in the *Particles of Faith* Teacher Resource Guide include quizzes and tests. Trasancos also has produced videos with related content in conjunction with Bishop Robert Barron and Word on Fire Catholic Ministries. She employs encyclicals such as Pope Francis's *Laudato Si'*, the deep reflections of theologians such as St. Thomas Aquinas, and the exacting work of Catholic scientists such as Fr. Georges Lemaître—who proposed the game-changing Big Bang theory—to show how science and faith are interwoven lights meant to guide students on the path to truth. Trasancos also explains how the Catholic faith and science work together to reveal the truth of Christ through the beauty of his creation. She leads with the understanding that science awakens the wonders of the foundational statement of the faith: that God is Creator of all, seen and unseen.

How old is the Earth? What is the origin of life? What really is evolution, anyway? Can I believe in Jesus & science? When it comes to the origin of the universe and the amazing gift of life, most everyone has pondered or questioned how they have come to be. We all know how much of a powder keg these topics can be, how dividing, how destructive, and how argumentative our language and tone can get. This book will dive into the discussion in a way that is respectful of the science and the scriptures. Our culture is very good at making people of faith feel dumb when it comes to these big questions. *I believe in Jesus & science: is that possible?* is a tool to help find and reverse the decay in what followers of Christ believe.

Scientist, writer, and scholar Stacy Trasancos gives us ways we can talk about how science and our Catholic faith work together to reveal the truth of Christ through the beauty of his creation. As a scientist who was led to Catholicism through her work, Stacy Trasancos has confronted some of the basic questions we all face. In *Particles of Faith*, she teaches us how to explain the symbiotic beauty between our curiosity expressed through science and our love of Christ and his Church. Trasancos uses her own story, as well as encyclicals such as Pope Francis's *Lumen Fidei*, the deep reflections of theologians such as St. Thomas Aquinas, and the exacting work of Catholic scientists like Rev. Georges Lemaître (who proposed the game-changing Big Bang theory), to show how science and faith are interwoven and meant to guide us on the path to truth. believe in science nacho libre: Science Proves That God Exists William Schonfelder, 2022-11-03 When I was in school back in the aEUR(tm)60s, I was taught many things that I believed were factual and honest in truth and knowledge. As an example, that we came from monkeys and that the cavemen came from fish that walked on the land. My science teacher taught us that all things happened from a single Big Bang theory. I believed in these things that were taught to me so much as to defend them without any real information behind it other than what I was taught or shown.
