benefits of taking a psychology class: Cognitive Benefits of Technologies Applied to Learning in Education Beatriz Peña-Acuña, Yolanda Navarro Abal, Pedro Román-Graván, Pedro Tadeu, Manuel León-Urrutia, Javier Ávila-López, Rafael Crismán Crismán Pérez, Carmen M. Toscano-Fuentes, Carmen María Martín Del Pino, 2025-03-12 In general, scientific inquiry about the benefits of digital gadgets focused on learning at all stages of Education is providing cognitive, affective, and attitudinal variables. However, cognitive effects stand out among these effects. In this topic of inquiry that we propose, we intend to investigate the phenomenon from a simple discipline to a multidisciplinary point of view, that is, from interventions that work transversally on some transversal theme in different disciplines or with a review approach from various points of view. We also propose it to deepen the phenomenon with interventions that are investigated from an interdisciplinary perspective, taking into account the qualitative and/or quantitative study of a variable from one discipline and another variable from another discipline. Likewise, other studies of the cognitive effects of technologies in learning with paradigms or innovative approaches and evaluation of more complex interventions can be considered. We are in a moment of transition from the use of analogue materials to digital tools (platforms, applications, gadgets, tablets, mobiles, etc.) and advanced technology formats (immersive realities and artificial intelligence). This is a moment of technological transformation in which the benefits of new technologies in learning are beginning to be investigated both in interventions with grouping in individual perspective or in an interactive and collaborative perspective among equals. It also coincides with the development of neuroscience and psychology applied to Education. This research topic aims to contribute to deepen this topic and provide a global vision. It also intends to indicate to what extent the development of the cognitive is relevant, as well as to extend the variables that must be considered.
