benefits of professional development for teachers: Collective Responsibility: Redefining

What Falls Between the Cracks for School Reform Frances Whalan, 2012-09-17 How to achieve school reform and organisational change has been a subject of much inquiry and interest by educators, education systems and academics. This volume advances both conceptual and methodological knowledge in understanding the cultural changes required at the school level to develop teachers' collective responsibility for student learning. The concept of teachers' collective responsibility is both intriguing and elusive as it traverses both sociological and psychological aspects of teaching. Five major but interconnected discourses: professional community; professional development; relational trust; accountability; and efficacy map the terrain of this complex phenomenon. Results reported in this volume provide clear evidence that collective responsibility is positively correlated the coherence between professional learning programs and the school's learning goals, teachers' commitment to enact those shared goals and teacher-to-teacher trust. In addition, teachers' collective struggle to address pressing issues for teaching and learning, and pedagogical leadership, when embedded in the organisational capacity of a school, form a complex and dynamic set of factors influencing the development of collective responsibility. Drawing together these important findings surfaces a need to rethink how schools, education systems and academics pay attention to what falls between the cracks for school reform. This book addresses aspects of school culture that guide the choices in the development of teachers' collective responsibility. Professional development, collective struggle, professional community, relational trust and pedagogical leadership as elements of school culture and organisational reform are modelled as a continuum of micro-political conditions interacting at the school level. This model offers new insights into the complexity of collective responsibility as a multi-dimensional phenomenon and is a useful guide to organisational change for school and system leaders and academics whose research interests are focused on the how of organisational change.

benefits of professional development for teachers: Investigating the Impact of Information Communication Technology on Self-directed Professional Development of Teachers Emmanuel Mushayikwa, 2011-03-02 The aim of this research was to investigate the perceived impact of ICT on Zimbabwean A-level science and mathematics teachers' self-directed professional development. The study was based on a questionnaire survey of 254 teachers throughout the country. Supplementary data came from 54 interviews. Some observations of teachers using ICT in teacher-centres, e-mail correspondence, and field reports also contributed to the database of the study. An analysis framework was developed through the use of grounded theory on the interview transcripts. The framework yielded 9 themes relating to the teachers' use of ICT for their professional development. These were: (1) perceived professional identity; (2) career development; (3) Managing the ICT environment; (4) theoretical and content knowledge; (5) practical knowledge and skills; (6) adaptation; (7) professional networking and; (8-9) perceived benefits to teachers and students. Chaos (complexity) theory was used to identify the major attractors (goals) for teachers' self-directed professional development using ICT. Two attractors were identified. These were personal professional development and classroom practice. However, an over-riding factor common to both attractors was identified as self-efficacy. The study identified the over-arching driver for self-directed professional development as the teacher's need to improve their self-efficacy. A two dimensional model of self-directed professional development was suggested. The systemic element of the model focused on the self-correcting impact of ICT use on professional development, whilst the personal element focused on self-efficacy as the central stratum for self-directed professional development. The study concluded by acknowledging the potent role that ICT is playing in the self-directed continuing professional development of teachers in Zimbabwe, and recommended, among other things, the inclusion of A-level teachers in the development of localised online materials resources for their subjects. This will help to enhance relevance of the materials to the Zimbabwean context
