benefits of aerospace engineering: Space Technologies for the Benefit of Human Society and Earth Phillip Olla, 2009-03-18 Overview of Space Technology It has been over 50 years since the first satellite was sent into orbit, and the impact of space technology can be felt in many aspects in our day to day life. In addition to the convenience of knowing exactly where we are on the planet via GPS satellites; or deciding what to pack for a trip based on forecasts from weather satellites; watching CNN in a remote village via broadcasting satellites; there are now some crucial environmental uses of Space technologies in the areas of natural resources management and environmental monitoring. Remotely sensed data reveals an unparalleled view of the Earth for systems that require synoptic or periodic observations such as inventory control, surveying, agriculture, business, mineralogy, hydrography, geology, land mass cover, land utilization and environment monitoring. The advancement of remote sensing has made remote sensed data more affordable and available to merge with a variety of data sources to create mash-ups. The amalgamation of these data sources into disciplines such as agriculture, urban planning, web applications, cartography, geodetic reference systems, and global navigation satellite systems, are an important advancement of space applications and space science. Space Technology and Millennium Development Goals (MDGs) The MDGs are a set of time-bound, measurable goals and targets that are global as well as country-specific for combating poverty, hunger, diseases, illiteracy, environmental degradation and discrimination against women.

benefits of aerospace engineering: *Changing Corporate America from Inside Out* Nicole Christine Raeburn, 2004 Despite the backlash against lesbian and gay rights occurring in cities and states across the country, a growing number of corporations are actually expanding protections and benefits for their gay and lesbian employees. Why this should be, and why some corporations are increasingly open to inclusive policies while others are determinedly not, is what Nicole C. Raeburn seeks to explain in *Changing Corporate America from Inside Out*. A long-overdue study of the workplace movement, Raeburn's analysis focuses on the mobilization of lesbian, gay, and bisexual employee networks over the past fifteen years to win domestic partner benefits in Fortune 1000 companies. Drawing on surveys of nearly one hundred corporations with and without gay networks, intensive interviews with human resources executives and gay employee activists, as well as a number of case studies, Raeburn reveals the impact of the larger social and political environment on corporations' openness to gay-inclusive policies, the effects of industry and corporate characteristics on companies' willingness to adopt such policies, and what strategies have been most effective in transforming corporate policies and practices to support equitable benefits for all workers. Nicole C. Raeburn is assistant professor and chair of sociology at the University of San Francisco.
