berlin bau construction company: *Finding Ella Briggs* Despina Stratigakos, Elana Shapira, 2025-10-28 The first biography of an extraordinary woman and architect who left her mark on world capitals and reshaped modern design Ella Briggs (1880-1977) was a talented architect, designer, and writer whose influence was felt on both sides of the Atlantic. She trained with the Viennese Secessionists and brought their radical ideas to Gilded Age New York. She designed modernist housing for the masses in Austria, was jailed as a suspected spy in Mussolini's Italy, and thrived in Weimar Germany before suffering persecution under the Nazis. Fleeing to London, she contributed to England's postwar reconstruction. Yet despite a long and prolific career, her name is largely forgotten today. Finding Ella Briggs restores Briggs to her rightful place in the history of modernist design. Despina Stratigakos and Elana Shapira bring together an international team of historians to provide the defining biography of this boldly unconventional designer. Whether she was fighting for integration at Europe's architecture schools or writing about innovative houses for American women's magazines like Good Housekeeping, Briggs embodied the transatlantic flow of modernism. This panoramic book uncovers new findings about Briggs, her networks, and projects, recovering the many facets of a life that spanned global borders and cultures. Beautifully illustrated and drawing on a wealth of previously unpublished research from archives around the world, Finding Ella Briggs is the inspiring story of a woman who defied all obstacles to pursue her dream of designing for the modern client. berlin bau construction company: *Greening Berlin* Jens Lachmund, 2013-01-04 How plant

and animal species conservation became part of urban planning in Berlin, and how the science of ecology contributed to this change. Although nature conservation has traditionally focused on the countryside, issues of biodiversity protection also appear on the political agendas of many cities. One of the emblematic examples of this now worldwide trend has been the German city of Berlin, where, since the 1970s, urban planning has been complemented by a systematic policy of “biotope protection”—at first only in the walled city island of West Berlin, but subsequently across the whole of the reunified capital. In *Greening Berlin*, Jens Lachmund uses the example of Berlin to examine the scientific and political dynamics that produced this change. After describing a tradition of urban greening in Berlin that began in the late nineteenth century, Lachmund details the practices of urban ecology and nature preservation that emerged in West Berlin after World War II and have continued in post-unification Berlin. He tells how ecologists and naturalists created an ecological understanding of urban space on which later nature-conservation policy was based. Lachmund argues that scientific change in ecology and the new politics of nature mutually shaped or “co-produced” each other under locally specific conditions in Berlin. He shows how the practices of ecologists coalesced with administrative practices to form an institutionally embedded and politically consequential “nature regime.” Lachmund's study sheds light not only on the changing place of nature in the modern city but also on the political use of science in environmental conflicts, showing the mutual formation of science, politics, and nature in an urban context.

berlin bau construction company: Translation and Interpreting in the 20th Century

Wolfram Wilss, 1999-02-15 This book provides a historical survey of the unfolding of translation and interpreting (language mediation) in the 20th century with special reference to the German-speaking area. It is based first, on extensive archive research in Austria, Germany, and Switzerland, second, on a large number of interviews with experts in the field of language mediation, and third, on the author's observations and experiences in the field of translation practice, translation teaching, and translation studies between 1950-1995. A specific feature of the book is the description of the social role of the language mediator through the prisms of communicative targets and technological developments and to determine his function as that of an indispensable bridge-builder between the members of differing linguistic and cultural communities. Historically, it distinguishes between three main phases, the period from 1900 to 1919 with the dominance of French as lingua franca in international communication, the period from 1919 to 1945, which is characterized by English-French bilingualism, and the period from 1945 to approximately 1990 with its massive trend toward multilingualism and the development of language mediation into a “translation industry”. The book continues with chapters on the implications of globalization, specialization and automaticization for international communication and it closes with reflections on future prospects for the profession in a knowledge society, both from a practical and a pedagogical viewpoint.

berlin bau construction company: Construction Materials Manual Manfred Hegger, Volker Auch-Schwelk, Matthias Fuchs, Thorsten Rosenkranz, 2013-02-12 Until now, the few existing systematic texts on construction materials have primarily been directed at building engineers. An overview for architects, which also considers the importance of construction materials in the sensory perception of architecture—including tactile qualities, smell, color, and surface structure—has not been available. With the publication of the Construction Materials Manual, all that has changed. As a basic work aimed equally at the questions and perspectives of architects and building engineers, it will bring together all of the above-mentioned viewpoints. It addresses fundamental questions of sustainability, including life-span, environmental impact, and material cycles, while also presenting material innovations. All of the principal conventional and innovative construction materials are comprehensively documented, with attention to their production, manufacture, fabrication, treatment, surfaces, connections, and characteristics. International examples help to illustrate their use in architecture, where a building's appearance is often defined by a single material. Thus, the Construction Materials Manual will support the daily work of architects and engineers in the choice of construction materials in a comprehensive and at the same time vivid and stimulating manner.
