berkeley political science ranking: *Teacher Development in Higher Education* Eszter Simon, Gabriela Pleschová, 2012 Concerns about the quality of teaching and learning in higher education have given rise to teacher development programs and centers around the world. This book investigates the challenges and complexities of creating instructional development programs for present and future academics. Using case studies from a variety of countries, including Estonia, Singapore, the United States, and the United Kingdom, it examines issues that are important for higher education researchers as well as for higher education managers. The book introduces different responses from around the world to the need to improve teaching in higher education, demonstrates many different ways success may be understood, and investigates what factors may influence the results of instructional development. Contributors use these factors, as well as those found in the related literature, to explain program success through theoretical frameworks. This book also provides input for higher-education managers by pointing out how the local context and both institutional and national policy-making may help or hinder the effective preparation of professors for their teaching responsibilities.

berkeley political science ranking: *Global University Rankings* T. Erkkilä, 2013-09-26 *Global University Rankings* explores the novel topic of global university rankings and their effects on higher education in Europe. The contributions in this volume outline different discourses on global university rankings and explore the related changes concerning European higher education policies, disciplinary traditions and higher education institutions. The first global university rankings were published less than a decade ago, but these policy instruments have become highly influential in shaping the approaches and institutional realities of higher education. The rankings have portrayed European academic institutions in a varying light. There is intense reflexivity over the figures, leading to ideational changes and institutional adaptation that take surprisingly similar forms in different European countries. The contributions in this book critically assess global university rankings as a policy discourse that would seem to be instrumental to higher education reform throughout Europe.

berkeley political science ranking: *International Relations Scholarship Around the World* Arlene B. Tickner, Ole Wæver, 2009-06-24 It has become widely accepted that the discipline of International Relations (IR) is ironically not international at all. IR scholars are part of a global discipline with a single, shared object of study - the world, and yet theorizing gravitates around a number of concepts that have been conceived solely in the United States. The purpose of this book is to re-balance this western bias by examining the ways in which IR has evolved and is practiced

around the world. The fifteen case studies offer fresh insights into the political and socioeconomic environments that characterize diverse geocultural sites and the ways in which these traits inform and condition scholarly activity in International Relations. By bringing together scholars living and working across the globe Tickner and Wæver provide the most comprehensive analysis of IR ever published. It is essential reading for anyone who is concerned about the history, development and future of international relations.

berkeley political science ranking: *The Gold and the Blue, Volume One* Clark Kerr, 2001-10-16 In volume one, Kerr describes the private life of the university from his first visit to Berkeley as a graduate student at Stanford in 1932 to his dismissal under Governor Ronald Reagan in 1967. Early in his tenure as a professor, the Loyalty Oath issue erupted, and the university, particularly the Berkeley campus, underwent its most difficult upheaval until the onset of the Free Speech Movement in 1964. Kerr discusses many pivotal developments, including the impact of the GI Bill and the evolution of the much-emulated 1960 California Master Plan for Higher Education. He also discusses the movement for universal access to education and describes the establishment and growth of each of the nine campuses and the forces and visions that shaped their distinctive identities.

berkeley political science ranking: *The Politics of Bad Governance in Contemporary Russia* Vladimir Gel'man, 2022-07-06 In this book, Vladimir Gel'man considers bad governance as a distinctive politico-economic order that is based on a set of formal and informal rules, norms, and practices quite different from those of good governance. Some countries are governed badly intentionally because the political leaders of these countries establish and maintain rules, norms, and practices that serve their own self-interests. Gel'man considers bad governance as a primarily agency-driven rather than structure-induced phenomenon. He addresses the issue of causes and mechanisms of bad governance in Russia and beyond from a different scholarly optics, which is based on a more general rationale of state-building, political regime dynamics, and policy-making. He argues that although these days, bad governance is almost universally perceived as an anomaly, at least in developed countries, in fact human history is largely a history of ineffective and corrupt governments, while the rule of law and decent state regulatory quality are relatively recent matters of modern history, when they emerged as side effects of state-building. Indeed, the picture is quite the opposite: bad governance is the norm, while good governance is an exception. The problem is that most rulers, especially if their time horizons are short and the external constraints on their behavior are not especially binding, tend to govern their domains in a predatory way because of the prevalence of short-term over long-term incentives. Contemporary Russia may be considered as a prime example of this phenomenon. Using an analysis of case studies of political and policy changes in Russia after the Soviet collapse, Gel'man discusses the logic of building and maintaining the politico-economic order of bad governance in Russia and paths of its possible transformation in a theoretical and comparative perspective.
