best intro to psychology textbook: Early Development and Leadership Susan E. Murphy, Rebecca Reichard, 2012-03-29 Today we often look to our leaders in business, government, or the social sector, to make effective decisions in a complex world. Whether they are asked what steps to take to improve competitiveness in a global economy or to make tough ethical choices, well-trained leaders are critical to organizational effectiveness. Although we know much about leadership development for individuals after they take their first job, we know relatively little about their earlier experiences that contributed to their interest in leadership or subsequent effectiveness as leaders.

This volume brings together researchers who explore leadership at different points before individuals enter the workforce and asks important questions surrounding definitions of leadership behavior, necessary leader skills and age-related leader tasks, factors contributing to development of leader identity, and ways to improve the process of leader development. With contributions from well-known leadership researchers such as Robert Sternberg, Howard Gardner, Bruce Avolio, and Susan Komives, the volume shows research evidence for factors such as early childhood and youth experiences on leadership development, which have implications for the way we understand and train leadership in today's organizations.

best intro to psychology textbook: Investigating the Stanford Prison Experiment

Thibault Le Texier, 2024-08-08 In 1971, psychologist Philip Zimbardo ran the now famous Stanford prison experiment to show that prison could make normal people behave in pathological ways. Based on the first thorough investigation in the archives of the experiment and on interviews with about half of its participants, this book shows that the Stanford prison experiment is far from being scientific. In particular, the guards knew what results were expected from them, they were trained and supervised by the experimenters, and they were following a schedule and a set of rules written by the experimenters. The experimenters deceived the guards and made them believe they were not subjects. They also borrowed many elements from a previous student experiment without disclosing this information in their reports. The prisoners were not allowed to leave the experiment at will, and they were conditioned by the experimenters. The mock prison situation was unrealistic. Most participants did not forget they were participating in an experiment, and many responded to demand characteristics. The data was not collected properly. And the conclusions were pre-written according to non-academic aims. This book goes beyond the experiment to provide ample background and context, in order to understand how the experiment was planned, financed, recorded, and divulged in the press and within the academic. It discusses also the role played by Philip Zimbardo in the trial of one of the guards of Abu Ghraib, as well as the impact of mass media on science, the debates between personal psychology and social psychology, and the specific nature of cold war social science.
