best friends animal society founders: A Vegan Ethic Mark Hawthorne, 2016-07-29 If veganism is about doing your best to not harm any sentient life, we must logically extend that circle of compassion to human animals as well, writes Mark Hawthorne in this practical, engaging guide to veganism and animal rights. Along with proven advice for going and staying vegan, an overview of animal exploitation, and answers to common questions about ethical eating (such as "Isn't 'humane meat' a good option?" and "Don't plants feel pain?"), A Vegan Ethic draws on the work and experiences of intersectional activists to examine how all forms of oppression - including racism, sexism, ableism, and speciesism - are connected by privilege, control, and economic power. By recognizing how social justice issues overlap, we can develop collaborative strategies for finding solutions.

best friends animal society founders: The Copepodologist's Cabinet David M. Damkaer, 2002 Copepod crustaceans are the most numerous multicellular animals on earth. They occur in every free-living and parasitic aquatic niche. Copepods have been known since the time of Aristotle, yet there has never been a history of the study of copepods. This volume, the first in a planned

three-volume series, reviews the discoveries of copepods to 1832, the year that the two distinct branches, the free-living copepods (long-known as insects) and the parasitic copepods (thought to be molluscs or worms) were finally acknowledged as members of the same Class Crustacea. The narrative includes the biographies of 90 early copepodologists and recounts their most important contributions to science. Portraits are included for two-thirds of the subjects, with considerable new material as well as information and illustrations from obscure sources. Milestones include the first description of copepods (ca. 350 B.C.), the first illustration (1554), the first free-living freshwater copepod (1688), the first explanation of a free-living copepod's metamorphosis (1756), the first permanently named copepod (1758), the first free-living marine copepod (1770), and the first description of a parasitic copepod's metamorphosis (1819). The work ends with a transition to the mid-19th century, previewing numerous personal connections that pointed toward copepodology's Golden Age in the 1890s, to be covered in Volume 2. A final volume will take the history of the study of copepods to ca. 1950.

best friends animal society founders: Children of Lucifer Ruben van Luijk, 2016-05-02 If we are to believe sensationalist media coverage, Satanism is, at its most benign, the purview of people who dress in black, adorn themselves with skull and pentagram paraphernalia, and listen to heavy metal. At its most sinister, its adherents are worshippers of evil incarnate and engage in violent and perverse secret rituals, the details of which mainstream society imagines with a fascination verging on the obscene. *Children of Lucifer* debunks these facile characterizations by exploring the historical origins of modern Satanism. Ruben van Luijk traces the movement's development from a concept invented by a Christian church eager to demonize its internal and external competitors to a positive (anti-)religious identity embraced by various groups in the modern West. Van Luijk offers a comprehensive intellectual history of this long and unpredictable trajectory. This story involves Romantic poets, radical anarchists, eccentric esotericists, Decadent writers, and schismatic exorcists, among others, and culminates in the establishment of the Church of Satan by carnival entertainer Anton Szandor LaVey. Yet it is more than a collection of colorful characters and unlikely historical episodes. The emergence of new attitudes toward Satan proves to be intimately linked to the ideological struggle for emancipation that transformed the West and is epitomized by the American and French Revolutions. It is also closely connected to secularization, that other exceptional historical process which saw Western culture spontaneously renounce its traditional gods and enter into a self-imposed state of religious indecision. *Children of Lucifer* makes the case that the emergence of Satanism presents a shadow history of the evolution of modern civilization as we know it. Offering the most comprehensive account of this history yet written, van Luijk proves that, in the case of Satanism, the facts are much more interesting than the fiction.
