creighton university physical therapy: Educating Physical Therapists Gail Jensen, 2024-06-01 The Preparation for the Professions Program by the Carnegie Foundation for the Advancement of Teaching focused on education in five professions (clergy, law, engineering, nursing, and medicine), but its influence has been felt throughout higher education and has inspired other professions to turn a critical eye to their own pedagogy. Modeled after the Carnegie Foundation's example, Drs. Gail Jensen, Elizabeth Mostrom, Laurita Hack, Terrence Nordstrom, and Jan Gwyer began an examination of the state of physical therapist education in the United States in their study, *Physical Therapist Education for the Twenty First Century (PTE-21): Innovation and Excellence in Physical Therapist Academic and Clinical Education*. With the same team of authors, *Educating Physical Therapists* documents this examination, detailing the key findings of the study and expanding on its implications. The text begins by looking at the current state of physical therapist education across the continuum, from professional education through residency, then continues by describing exemplars of excellence and best practices that were observed in academic and clinical settings. Through this survey of the profession, a conceptual model of excellence in physical therapist education is derived and presented with practical recommendations. Areas addressed: Elements that promote a culture of excellence Critical needs for advancing learning and the learning sciences Academic and clinical organizational imperatives The critical need for system-based reform Finally, after looking at the current state of physical therapy education, *Educating Physical Therapists* looks to the future, providing a reimagined vision for what professional education and the profession could be. These recommendations for growth come with commentary by international experts in physical therapy education, providing a wide range of perspectives. After an intensive examination of physical therapist education, *Educating Physical Therapists* is designed to change the way educators and administrators across academic and clinical settings prepare physical therapists for the future. From the Foreword... The authors of this volume have much to teach us, and they have taught us well. We can accept their recommendations, or we can argue with them. To ignore them is impossible. - Lee S. Shulman, PhD, President Emeritus, The Carnegie Foundation for the Advancement of Teaching

creighton university physical therapy: Leadership in Interprofessional Health Education and Practice Charlotte Brasic Royeen, Royeen, Gail M. Jensen, Robin Ann Harvan, 2008-10-30 The

changing landscape of health care continues to grow more diverse. As young health professionals move into clinical practice and face challenging health demands and increasing health care costs, they must be prepared to work in interprofessional teams despite a lack of experience in team-based skills. *Interprofessional Healthcare: Education and Practice for Rural and Underserved Populations* represents a collective response to this problem from educators, clinicians, and community health leaders to create a resource for interprofessional education and practice. Divided into five sections, this book includes the necessary information to encourage dialogue, debate, and action in interprofessional education needed to meet the health care needs for the present and the future.

creighton university physical therapy: Clinical Reasoning and Decision Making in Physical Therapy Gina Musolino, Gail Jensen, 2024-06-01 Clinical reasoning is an essential non-negotiable element for all health professionals. The ability of the health professional to demonstrate professional competence, compassion, and accountability depend on a foundation of sound clinical reasoning. The clinical reasoning process needs to bring together knowledge, experience, and understanding of people, the environment, and organizations along with a strong moral compass in making sound decisions and taking necessary actions. While clinical reasoning and the role of mentors has been a focus of the continued growth and development of residency programs in physical therapy, there is a critical need to have a broader, in-depth look at how educators across academic and clinical settings intentionally facilitate the development of clinical reasoning skills across one's career. *Clinical Reasoning and Decision Making in Physical Therapy: Facilitation, Assessment, and Implementation* fills this need by providing a comprehensive and in-depth focus on development of the patient-client management skills of clinical reasoning and clinical decision-making. It takes into account teaching and learning strategies, assessment, and technological applications across the continuum from novice to residents/fellows-in-training, along with academic and clinical faculty for both entry-level and specialist practice. Drs. Gina Maria Musolino and Gail Jensen have designed this comprehensive resource with contributions from professional colleagues. The text centers on life-long learning by encouraging the development of clinical reasoning abilities from professional education through residency education. The aim and scope of the text is directed for physical therapy education, to enhance clinical reasoning and clinical decision-making for developing professionals and post-professionals in both clinical and academic realms, and for the development of clinical and academic faculty. *Clinical Reasoning and Decision Making in Physical Therapy* uniquely offers both evidence-based approaches and pragmatic consultation from award-winning authors with direct practice experiences developing and implementing clinical reasoning/clinical decision-making in practice applications for teaching students, residents, patients, and clinical/academic faculty in classrooms, clinics, and through simulation and telehealth. *Clinical Reasoning and Decision Making in Physical Therapy* is the first of its kind to address this foundational element for practice that is key for real-world practice and continuing competence as a health care professional. Physical therapy and physical therapist assistant students, faculty, and clinicians will find this to be an invaluable resource to enhance their clinical reasoning and decision making abilities.
