criminal and addictive thinking workbook: Policing Methamphetamine William Garriott, 2011-03-11 In its steady march across the United States, methamphetamine has become, to quote former Attorney General Alberto Gonzales, "the most dangerous drug in America." As a result, there has been a concerted effort at the local level to root out the methamphetamine problem by identifying the people at its source—those known or suspected to be involved with methamphetamine. Government-sponsored anti-methamphetamine legislation has enhanced these local efforts, formally and informally encouraging rural residents to identify meth offenders in their communities. Policing Methamphetamine shows what happens in everyday life—and to everyday life—when methamphetamine becomes an object of collective concern. Drawing on interviews with users, police officers, judges, and parents and friends of addicts in one West Virginia town, William Garriott finds that this overriding effort to confront the problem changed the character of the community as well as the role of law in creating and maintaining social order. Ultimately, this work addresses the impact of methamphetamine and, more generally, the war on drugs, on everyday life in the United States.

criminal and addictive thinking workbook: *Addiction Trajectories* Eugene Raikhel, William Garriott, 2013-04-18 Bringing anthropological perspectives to bear on addiction, the contributors to this important collection highlight the contingency of addiction as a category of human knowledge and experience. Based on ethnographic research conducted in sites from alcohol treatment clinics in Russia to Pentecostal addiction ministries in Puerto Rico, the essays are linked by the contributors' attention to the dynamics—including the cultural, scientific, legal, religious, personal, and social—that shape the meaning of addiction in particular settings. They examine how it is understood and experienced among professionals working in the criminal justice system of a rural

West Virginia community; Hispano residents of New Mexico's Espanola Valley, where the rate of heroin overdose is among the highest in the United States; homeless women participating in an outpatient addiction therapy program in the Midwest; machine-gaming addicts in Las Vegas, and many others. The collection's editors suggest addiction trajectories as a useful rubric for analyzing the changing meanings of addiction across time, place, institutions, and individual lives. Pursuing three primary trajectories, the contributors show how addiction comes into being as an object of knowledge, a site of therapeutic intervention, and a source of subjective experience. criminal and addictive thinking workbook: Psychotherapy in Corrections Peter N. Novalis, M.D., Ph.D., Virginia Singer, DNP, Carol M. Novalis, M.A., 2022-09-13 To practice psychotherapy in a correctional setting is to encounter a range of cultural issues reflecting the various ethnic, class, gender, and physical subgroups of the prison population--as well as to navigate the culture of the prison, staff, and justice system that underpins the patients' circumstances. Drawing on the authors' extensive professional experience, Psychotherapy in Corrections offers mental health professionals a comprehensive look at the most common situations they are likely to face and provides practical advice on dealing with them. Diagnostically oriented chapters cover core issues that include self-harm and substance use disorders, as well as mood and personality disorders. Specific supportive therapy techniques for addressing these issues, as well as special situations--including the experience of women in prison, behaviors that can disrupt care, and efforts to reduce recidivism--are illustrated by clinical vignettes. In tackling the social and developmental conditions that lead individuals to interact with the correctional system, Psychotherapy in Corrections also acknowledges the effects of the COVID-19 pandemic and the movement for social justice in society. Anyone who conducts psychotherapy in a prison setting will benefit from an approach centered on treating the human in front of them, regardless of the setting or their crime.
