criminal intelligence analyst certification: Improving Intelligence Analysis Stephen Marrin, 2012-08-21 This book on intelligence analysis written by intelligence expert Dr. Stephen Marrin argues that scholarship can play a valuable role in improving intelligence analysis. Improving intelligence analysis requires bridging the gap between scholarship and practice. Compared to the more established academic disciplines of political science and international relations, intelligence studies scholarship is generally quite relevant to practice. Yet a substantial gap exists nonetheless. Even though there are many intelligence analysts, very few of them are aware of the various writings on intelligence analysis which could help them improve their own processes and products. If the gap between scholarship and practice were to be bridged, practitioners would be able to access and exploit the literature in order to acquire new ways to think about, frame, conceptualize, and improve the analytic process and the resulting product. This volume contributes to the broader discussion regarding mechanisms and methods for improving intelligence analysis processes and products. It synthesizes these articles into a coherent whole, linking them together through common themes, and emphasizes the broader vision of intelligence analysis in the introduction and conclusion chapters. The book will be of great interest to students of intelligence studies, strategic studies, US national security, US foreign policy, security studies and political science in general, as well as professional intelligence analysts and managers.

criminal intelligence analyst certification: Crime and Technology Ernesto U. Savona, 2013-06-05 Guido Rossi As Chairman of ISPAC, I want to thank all the contributors to this book that originates from the International Conference on Crime and Technology. This could be the end of my presentation if I did not feel uneasy not considering one of the problems I believe to be pivotal in the relationship between crime and technology. I shall also consider that the same relationship exists between terror and globalization, while globalization is stemming from technology and terror from crime. Transnational terrorism is today made possible by the vast array of communication tools. But the paradox is that if globalization facilitates terrorist violence, the fight against this war without borders is potentially disastrous for both economic development and globalization. Antiterrorist measures restrict mobility and financial flows, while new terrorist attacks could lead the way for an antiglobalist reaction. But the global society has yet to agree on a common definition of terrorism or on a common policy against it. The ordinary traditional criminal law is still depending on the sovereignty of national states, while international criminal justice is only a spotty and contested last resort. The fragmented and weak international institutions and underdeveloped civil societies have

no power to enforce criminal justice against terrorism. At the same time, the states that are its targets have no interest in applying the laws of war (the Geneva Conventions) to their fight against terrorists.
