Bernat-N. Tiffon, 2022-04-04 Originally published in Spanish in 2017 by Libreria Bosch, Barcelona, the *Atlas of Forensic and Criminal Psychology* is a one-of-kind book made available in English for the first time. This unique work is highly illustrated with full-color images, providing a medico-legal examination of forensic pathology as it relates to cases of forensic psychological interest. The book begins with a historical perspective and includes images of patients to familiarize the reader with symptoms, the hazard-risk criteria, lethality, and suicidal rescue—research that Dr. Tiffon has addressed in his previous publications. Chapters present photographic records of cases to deepen forensic, psychologist, and medico-legal professionals' insight into thoughts, behaviors, and mechanisms of self- and hetero-aggressiveness. Such cases illustrate the outcomes of various disorders manifested in individuals and victims; as such, they provide an understanding of the psychological-legal conclusions reached in such cases in order to adapt the legal and preventative measures for specific situations. Coverage includes affective, schizophrenic, and personality disorders as contributing elements in diagnostic judgments, noting the great difficulty such examples present to experts performing psychopathological evaluations after criminal, and often violent, events have occurred. Various psychopathological disorders are addressed as well as the technical treatment that should occur in each case from a psychological-forensic perspective.
Features: • Presents a provocative look at various syndromes familiar to forensic psychologists, as applied to criminal cases and the pathology of suicide victims and homicide perpetrators • Combines the work of world-renowned expert contributors to examine the criminal, legal, and psychological facets of various diagnoses and case examples • Offers insight into the psychological state of suicide victims, considering their state of mind as a psychological autopsy

In the *Atlas of Forensic and Criminal Psychology*, his first book translated into English, Tiffon expands on these prior works, serving to provide a visual reference and guide to medical pathologists and consulting psychologists in cases of disorders in which psychopathological mutilation, injury, and self-injury occur.

criminal psychology vs forensic psychology: Psychology in the Justice System Jared Linebach, Lea Kovacsiss, 2016-08-17 A PDF excerpt from the book can be found at www.psychandcrime.org. The purpose of this book is to introduce aspects of forensic psychology that the reader may not realize are relevant to this field. Forensic psychology can be broadly defined as any area of the legal system where psychology is applied or consulted. This broad definition is integral to the book's foundation as seemingly disjointed topics are weaved together under the overarching umbrella of forensic psychology. When one thinks about the utilization of psychology in the legal system, thinking most often begins with some concept of criminal profiling. While profiling criminals is an aspect of forensic psychology, it is only a small portion. Within forensic psychology, there are two distinct areas in which forensic psychologists operate. The two vastly different areas are: Practical/Clinical: focuses on the ever-present needs of individuals in the legal system Research: focuses on gathering and compiling data in a useful manner Clinicians focus on populations close to the legal system such as jail or prison inmates, correctional officers, and police officers. Researchers may also focus on populations close to the legal system, but are not limited to those individuals. Researchers may, for example, be interested in the public's perception of a proposed new law or how closely a constituency agrees with a sheriff's stances on certain issues. While both of these areas are important, the purpose of this book is not to explore the distinctions between them. Herein, you will find topics relevant to forensic psychology in the broad sense but still related to its major subfields including: criminal psychology, police and investigative psychology, correctional psychology, legal psychology, and victimology.
