crossroads family medicine and pediatrics: The New Pediatrics Dorothy Pawluch, The new pediatrics that has developed over the past several decades defines itself by its shift away from the physical problems of children to encompass their emotional, psychological, social, and even, as some pediatricians have interpreted, their spiritual well-being. In an engaging, nontechnical style, Dorothy Pawluch also discusses the human impact of transforming technologies on the individual practitioners. All disciplines concerned with the role of the child in society must pause to think about the inner world of the profession that for over a century has argued that children and their

problems, medical and otherwise, are different and also claimed that it, better than anyone else, understands these problems.

crossroads family medicine and pediatrics: Integrative Pediatrics Timothy Culbert, Karen Olness, 2010-04-10 There is ample evidence that children and adolescents in large numbers are actively using integrative (complementary and alternative) therapies. Various studies now indicate that over 50% of pediatricians surveyed would refer a patient for integrative therapy, and they would welcome more natural therapies for children provided they were safe and effective. However, there has been little training for pediatricians in this area. Integrative Pediatrics addresses these issues and provides guidelines for pediatricians, parents, and general audiences in a balanced, evidence-based manner. In this volume in the Weil Integrative Medicine Library series, the authors describe a rational and evidence-based approach to the integrative therapy of childhood disorders and well-child care, integrating the principles of alternative and complementary therapies into the principles and practice of conventional pediatrics. The authors examine what works and what doesn't and offer practical guidelines for physicians to incorporate integrative medicine into their practice and how to advise patients and their parents on reasonable and effective therapies. The text also covers areas of controversy and identifies areas of uncertainty where future research is needed. Chapters also cite the best available evidence for both safety and efficacy of all therapies discussed. The series editor is Andrew Weil, MD, Professor and Director of the Program of Integrative Medicine at the University of Arizona. Dr. Weil's program was the first academic program in the US and he is the major name in integrative medicine in the US, and well-known around the world. His program's stated goal is to combine the best ideas and practices of conventional and alternative medicine into cost effective treatments without embracing alternative practices uncritically.

crossroads family medicine and pediatrics: American Pediatrics Sydney A. Halpern, 2024-03-29 Today's parents routinely consult pediatricians for care of sick youngsters, information on child development, and advice on problems of child management. Yet only a hundred years ago, special medical services for children barely existed. During the intervening century, physicians defined a new field and built occupational structures that established pediatrics as a permanent division of medical practice. Professor Halpern traces the development of American pediatrics over the last century and identifies social processes underlying its evolution. How did the pediatric specialty arise? Through what processes did it emerge? What forces shaped its changing scope and organization? In addressing these questions, the author draws on a rich combination of primary and secondary historical sources, unpublished documents, and interview data. She shows how successive

generations of specialists redefined pediatrics and created a series of occupational institutions, including professional societies, academic divisions, training programs, and certifying boards. American Pediatrics offers an original approach to the study of medical specialties and professions and contributes a new perspective on professionalism. Showing specialties to be both products and agents of societal change, the book highlights multiple and interrelated forces contributing to the rise of new professions and documents the influence of surrounding occupations on the shape specialties assume. Halpern enriches our understanding of American medicine and clarifies the origins of expert services for children and families. crossroads family medicine and pediatrics: Debates on U.S. Health Care Jennie Jacobs Kronenfeld, Wendy E. Parmet, Mark A. Zezza, 2012-09-06 This issues-based reference work (available in both print and electronic formats) shines a spotlight on health care policy and practice in the United States. Impassioned debates about the best solutions to health care in America have perennially erupted among politicians, scholars of public policy, medical professionals, and the general public. The fight over the Health Care Reform Act of 2010 brought to light a multitude of fears, challenges, obstacles, and passions that often had the effect of complicating rather than clarifying the debate. The discourse has never been more heated. The complex issues that animate the health care debate have forced the American public to grapple with the exigencies of the present system with regard to economic, fiscal, and monetary policy, especially as they relate to philosophical, often ideologically driven approaches to the problem. Americans have also had to examine their ideas about the relationship of the individual to and interaction with the state and the

varied social and cultural beliefs about what an American solution to the problem of health care looks like. In light of the need to keep students, researchers, and other interested readers informed and up-to-date on the issues surrounding health care in the U.S., this volume uses introductory essays followed by point/counterpoint articles to explore prominent and perennially important debates, providing readers with views on multiple sides of this complex issue. Features & Benefits: The volume is divided into three sections, each with its own Section Editor: Quality of Care Debates (Dr. Jennie Kronenfeld), Economic & Fiscal Debates (Dr. Mark Zezza), and Political, Philosophical, & Legal Debates (Prof. Wendy Parmet). Sections open with a Preface by the Section Editor to introduce the broad theme at hand and provide historical underpinnings. Each Section holds 12 chapters addressing varied aspects of the broad theme of the section. Chapters open with an objective, lead-in piece (or headnote) followed by a point article and a counterpoint article. All pieces (headnote, point article, counterpoint article) are signed. For each chapter, students are referred to further readings, data sources, and other resources as a jumping-off spot for further research and more in-depth exploration. Finally, the volume concludes with a comprehensive index, and the electronic version of the book includes search-and-browse features, as well as the ability to link to further readings cited within chapters should they be available to the library in electronic format.

crossroads family medicine and pediatrics: *Preventing Child Maltreatment in the U.S.*

Esther J. Calzada, Monica Faulkner, Catherine LaBrenz, Milton A Fuentes, 2022-09-16 This book is part of a concentrated series of books that examines child maltreatment across cultural groups. Specifically, this volume examines core concepts relevant to Latinx families (e.g., familismo, acculturation, spirituality, oppression) as they relate to child maltreatment in the United States. While there are vast differences across Latinx families, authors use critical race and feminist theories to explore the impact of differences based on gender, race, immigration status, and country of origin. The book begins by contextualizing child maltreatment in Latinx families within the pervasive structural racism and inequality in the United States and addressing unique traumas experienced by Latinx families resulting from that inequity. Subsequent chapters address prevention of child maltreatment, responses to maltreatment and healing from trauma with an emphasis on resilience within the Latinx community. Three case studies are used to illustrate and apply concepts from each chapter.

crossroads family medicine and pediatrics: Our Shrinking Globe: Implications for Child Safety, An Issue of Pediatric Clinics of North America Avinash Shetty, 2016-01-19 Pediatricians in the United States and around the World continue to face a myriad of global health threats affecting child and adolescent health including: 1) infectious diseases of poverty [e.g. human immunodeficiency virus (HIV), tuberculosis, malaria, and neglected tropical diseases] in low-and middle-income countries (LMIC), especially in sub Saharan Africa; 2) emerging and reemerging infectious diseases (such as Ebola); 3) rise of non-communicable diseases (e.g. common mental disorders); 4) unintentional injuries; and 5) environmental health hazards (e.g. climate change). Despite the promising news about rapid declines in maternal and child mortality in the era of Millennium Development Goals (MDGs), which originated from the United Nation (UN) Millennium Declaration in 2000, only 20% and 7% of LMIC are currently on track to attain the maternal and child mortality targets. For example, 44% of deaths in children younger than 5 years occur in neonates. Besides discovery of life-saving interventions (e.g. development of new and improved vaccines) for maternal and child health, we also need to do a better job at bridging the knowledge-implementation gap and increase the effectiveness of proven interventions. For example, despite the availability of effective vaccines to prevent pneumococcal pneumonia, rotavirus gastroenteritis, and human papilloma virus-related diseases (e.g. cervical cancer), use of these vaccines remain suboptimal in LMIC. We need to recognize that global health is also local public health. For example, improving access, equity and quality of care for orphans and vulnerable children, immigrant and newly arrived refugee children in the U.S. remains a challenge. Timely access to psychiatric care for children and adolescents with mental illness is a major concern. The

explosion of new age technology (such as the internet) also poses a considerable risk to children and adolescents. Pediatricians also need to be aware of diverse socio-cultural determinants of health and ethical issues in global health service and delivery. This issue of *Pediatric Clinics of North America* aims to address the above crucial global health challenges affecting children and adolescents. As practicing pediatricians, we have the unique opportunity to influence local and global public health. In the post-MDG era (beyond 2015), collaborative partnerships between various disciplines and across research, education and service is vital to reduce health inequities in children worldwide.

crossroads family medicine and pediatrics: *The Routledge International Handbook of Children, Adolescents and Media* Dafna Lemish, 2013-07-18 The roles that media play in the lives of children and adolescents, as well as their potential implications for their cognitive, emotional, social and behavioral development, have attracted growing research attention in a variety of disciplines. The Routledge International Handbook of Children, Adolescents and Media analyses a broad range of complementary areas of study, including children as media consumers, children as active participants in media making, and representations of children in the media. The handbook presents a collection that spans a variety of disciplines including developmental psychology, media studies, public health, education, feminist studies and the sociology of childhood. Essays provide a unique intellectual mapping of current knowledge, exploring the relationship of children and media in local, national, and global contexts. Divided into five parts, each with an introduction explaining the themes and topics covered, the handbook features 57 new contributions from 71 leading academics from 38 countries. Chapters consider vital questions by analyzing texts, audience, and institutions, including: the role of policy and parenting in regulating media for children the relationships between children's on-line and off-line social networks children's strategies of resistance to persuasive messages in advertising media and the construction of gender and ethnic identities The Handbook's interdisciplinary approach and comprehensive, international scope make it an authoritative, state of the art guide to the nascent field of Children's Media Studies. It will be indispensable for media scholars and professionals, policy makers, educators, and parents.

crossroads family medicine and pediatrics: Behavioral Pediatrics Dennis C. Russo, 2013-06-29 As in any field of clinical or scientific endeavor, a cataloguing of the techniques and findings of behavioral pediatrics must follow shortly after the first few years of systematic work. This book has been designed to serve this initial summary function for the field. It represents a first attempt to bring together in one place the definition and scope of behavioral pediatrics and to outline current research and treatment approaches to various organic disorders, clinical settings, and problem areas in which a sufficient body of knowledge has accrued for authoritative statement. As the first text in a rapidly expanding area, our decisions regarding the topics to be covered and the contributors to this volume were guided by our desire to represent what we would consider to exemplify the field in its early development: pragmatic and thorough study of significant problems from a base of sound scientific inquiry. Each of the topics addressed in the present volume develops, in a preliminary fashion, an epistemology for current practice and future study. All of the contributing authors have been involved in the development of their specialty areas through their research and, importantly, through their clinical work in the hospitals affiliated with the medical schools in which they hold appointments.
