cstep summer research program: Succeeding in Academic Medicine John P. Sánchez, 2020-01-14 This first-of-its-kind book for underrepresented racial and ethnic minorities (URM), women, and sexual and gender minorities in medicine offers the core knowledge and skills needed to achieve a well-planned, fulfilling career in academic medicine. The knowledge and skills provided by the esteemed co-authors, successful diverse pre-faculty, and junior and senior academicians, are complemented by their inspirational and motivational stories. Increasing diversity in the academic medicine workforce has been identified and embraced as a core value of institutional excellence at nearly all academic institutions and professional associations. Despite this established core value, certain groups such as Black/African-American, Latino/Hispanic, American Indian/Alaska Native-identified individuals, women, and sexual and gender minorities, are still present in lower proportions compared with the general population and lack inclusion. In 12 chapters and with a unique focus on a practical approach to increasing diversity and inclusion in academic medicine, this book demystifies the often-insular world of academic medicine. It comprehensively outlines career opportunities and associated responsibilities, how to transform academic-related work to scholarship, and offers a clear and transparent look into the academic appointment and promotion process. By focusing on the practical steps described in this handy book, students and residents can

develop a strong foundation for an academic medicine career and succeed in becoming the next generation of diverse faculty and administrators.

cstep summer research program: Civic Engagement Pedagogy in the Community College: Theory and Practice Emily Schnee, Alison Better, Martha Clark Cummings, 2015-11-19 This book will help post-secondary educators to discover the joys and challenges of implementing theoretically grounded civic engagement projects on their campuses. The essays on civic engagement and public scholarship are written by an interdisciplinary group of community college faculty who have designed and implemented civic engagement projects in their classrooms. The projects they describe stand at the intersection of research, theory and pedagogy. They challenge dominant constructions of civic engagement as students bring their community, culture and history into the classroom. The authors consider the particular complexities and constraints of doing civically engaged teaching and scholarship at the community college level and situate their projects within current theoretical debates about civic engagement, public scholarship, and public higher education.

cstep summer research program: Enhancing and Expanding Undergraduate Research: A Systems Approach Mitchell Malachowski, Jeffrey M. Osborn, Kerry K. Karukstis, Elizabeth L. Ambos, 2015-03-30 Undergraduate research is a high-impact practice that sparks students' interest in learning and love for the discipline, and it improves retention, student success, graduation rates, and postgraduation achievement. Many individual campuses have offered these programs for several years, and the Council on Undergraduate Research (CUR) has supported their efforts in many ways. More recently CUR has partnered with state systems of higher education and public and private consortia to foster the institutionalization of undergraduate research at the member institutions and across the systems/consortia.--From publisher.

cstep summer research program: Without a Margin for Error Jeremy B. Heyman, 2018-11-01 In *Without a Margin for Error*, the author chronicles the journeys of young adults in an under-served urban community who are new to the English language into STEM (science, technology, engineering, and mathematics-related) fields from high school through college. He distills lessons, themes, and policy recommendations from the trails blazed by these students toward altering the status quo around college access and STEM success for often-marginalized but highly resilient young adults with much to contribute to their new nation, their communities, and the world. While drawing on a critical ethnography of over three dozen inspiring young adults, seven students are chronicled in greater depth to bring to life crucial conversations for redefining college readiness, access, and success in STEM fields.
