csuci school of education: Exemplary Clinical Models of Teacher Education Sara R. Helfrich, Sara L. Hartman, 2023-06-01 Across settings, teacher education programs utilize innovative practices to prepare teacher candidates, yet rarely is this work shared in a way that is accessible to

stakeholders. This book presents exemplary models utilized by universities in a variety of settings, with the objective of sharing with readers a sampling of research-based teacher preparation models that are currently in place at accredited universities and colleges across the country, in an effort to help others that are developing or redesigning their programs. Authors of the included chapters focused on the setting in which their college/university is located. Location impacts every aspect of a clinical model of teacher preparation, including the number and proximity of placements that are available for teacher candidates, access to resources, and diversity of experiences. The authors, in describing their clinical model, address how their location impacts their model, sharing information about the resources to which they have access, how they make use of available resources in potentially unique ways, as well as how they overcome a lack of resources to provide a meaningful and diverse experience for their candidates. Readers will be able to use this book to learn more about how similar colleges/universities are embracing their locations and resources to further the learning of their candidates and to implement these ideas within their own programs. All those involved in teacher preparation – state-level policy makers, university and P-12 administrators, and educators who bridge university and school settings to work together to prepare teacher candidates – will benefit from this book. It can serve as a resource for these individuals to help inform them of how universities and colleges across the country are implementing a clinically-based teacher preparation program so that they have a model for creating, implementing, assessing, and maintaining their own program. Additionally, teacher education faculty and staff may utilize it for help with self-studies and accreditation purposes, and as a text to use within courses in principal and/or superintendent preparatory programs.

csuci school of education: JSL Vol 26-N2 JOURNAL OF SCHOOL LEADERSHIP, 2016-04-13
JSL invites the submission of manuscripts that contribute to the exchange of ideas and scholarship about schools and leadership. All theoretical and methodological approaches are welcome. We do not advocate or practice a bias toward any mode of inquiry (e.g., qualitative vs. quantitative; empirical vs. conceptual; discipline-based vs. interdisciplinary) and instead operate from the assumption that all careful and methodologically sound research has the potential to contribute to our understanding of school leadership. We strongly encourage authors to consider both the local and global implications of their work. The journal's goal is to clearly communicate with a diverse audience including both school-based and university-based educators. The journal embraces a broad conception of school leadership and welcomes manuscripts that reflect the diversity of ways in which this term is understood. The journal is interested not only in manuscripts that focus on administrative leadership in schools and school districts, but also in manuscripts that inquire about teacher, student, parent, and community leadership.

csuci school of education: Guide to Digital Accessibility Rae Mancilla, Barbara A. Frey, 2023-07-03
The collective depth and tenure of experience of the authors in advancing accessibility practice is truly exceptional. In practical terms, the organization of the book makes clear the work to be done and the imperative for doing it. It is about understanding the context for accessibility and making change happen in policy, practice, and professional development. At QM, our position is straightforward. A course is not quality unless it is accessible for all. This book represents the many ways our community is walking that talk. -- from the Foreword by Deb Adair, Executive Director of Quality Matters
Approximately 8.5% of the general population of the United States has a disability affecting their computer and Internet use, which translates to over 28 million people in the U.S. alone whose disability impacts their access to digital content. Recent data indicates that around 19% of undergraduate students have a disability, yielding consequential implications for institutions of higher education. Regardless of disabilities or environmental constraints, educators have a legal and ethical responsibility to create online learning experiences that are accessible and usable by all learners. Addressed to higher education administrators, instructional designers, faculty developers, and faculty, this edited volume showcases the experiences and practices of Quality Matters institutions around the core tenets of digital accessibility, offering examples of policy, processes, practices, tools, and professional development. The contributors represent a carefully curated body

of institution types and classifications to ensure that all readers can transfer concepts into the contexts of their respective institutions. The book situates the digital accessibility movement within the context of major federal legislation, such as the Americans with Disabilities Act of 1990. It traces the evolution of Web Content Accessibility Guidelines for online course design and professional development based on the Quality Matters framework. Subsequent chapters describe the evolution of accessibility policy development as a driver of organizational culture, as well as a continuum of course design practices that can be implemented to proactively develop inclusive instructional materials. The Guide concludes by identifying a myriad of professional development formats for fostering accessibility knowledge and skill acquisition, including asynchronous workshops, micro credentials, and train-the-trainer models, sharing evaluation protocols that foster continuous improvement. Written for practitioners by practitioners, this book addresses vital compliance issues and maps a range of proven practices that will enrich the learning experience of all learners in digital environments.

csuci school of education: Visions from Professional Development School Partners Michael Cosenza, Marilyn Buchanan, 2018-01-01 Rich clinical preparation combined with progressive experiences in professional development school (PDS) settings are proposed to bring about systemic and impactful transformation of educator preparation and professional growth in order to improve and enhance P-12 student learning. In this book, diverse authors describe their efforts to forge PDS partnerships to develop and deliver high quality training and practical experiences for candidates, and simultaneously provide professional development for experienced practitioners in ways that mirror recommendations found in authoritative reports and literature. The authors' collective wisdom is vividly captured in the multi-voiced chapters that are collaborations between cooperating teachers, school administrators, county and district level administrators, university supervisors, and instructional faculty. The contexts authors write about are recognizable, and the accomplishments they experienced and challenges faced will resonate with institutions courageously undertaking change or renewal. The book will be invaluable to school and university faculty and administrators as they transition to a partnering model of clinical preparation for teacher candidates: it will help stakeholders decide if their schools and institutions are ready to commit to a partnership, and highlight the benefits they stand to gain, but realistically address challenges that may be faced by administrators and faculties as well as teacher candidates in the PDS enterprise.
