fort worth museum of science and history events: Arsenal of Defense J'Nell L. Pate, 2011-10-13 Named after Mexican War general William Jenkins Worth, Fort Worth began as a military post in 1849. More than a century and a half later, the defense industry remains Fort Worth's major strength with Lockheed Martin's F-35s and Bell Helicopter's Ospreys flying the skies over the city. Arsenal of Defense: Fort Worth's Military Legacy covers the entire military history of Fort Worth from the 1840s with tiny Bird's Fort to the massive defense plants of the first decade of the twenty-first century. Although the city is popularly known as "Cowtown" for its iconic cattle drives and stockyards, soldiers, pilots, and military installations have been just as important—and more enduring—in Fort Worth's legacy. Although Bird's Fort provided defense for early North Texas settlers in the mid nineteenth century, it was the major world conflicts of the twentieth century that developed Fort Worth's military presence into what it is today. America's buildup for World War I brought three pilot training fields and the army post Camp. During World War II, headquarters for the entire nation's Army Air Forces Flying Training Command came to Fort Worth. The military history of Fort Worth has been largely an aviation story—one that went beyond pilot training to the construction of military aircraft. Beginning with Globe Aircraft in 1940, Consolidated in 1942, and Bell Helicopter in 1950, the city has produced many thousands of military aircraft for the defense of the nation. Lockheed Martin, the descendant of Consolidated, represents an assembly plant that has been in continuous existence for over seven decades. With Lockheed Martin the nation's largest defense contractor, Bell the largest helicopter producer, and the Fort Worth Naval Air Station Joint Reserve Base Federal Medical Center Carswell the reservist's training pattern for the nation, Fort Worth's military defense legacy remains strong. Arsenal of Defense won first place in the Press Women of Texas Communications Contest (2012).

fort worth museum of science and history events: New Trends in Earth-Science Outreach and Engagement Jeanette L. Drake, Yekaterina Y. Kontar, Gwynne S. Rife, 2013-12-11 Perhaps just as perplexing as the biggest issues at the core of Earth science is the nature of communicating about nature itself. New Trends in Earth-Science Outreach and Engagement: The Nature of Communication examines the processes of communication necessary in bridging the chasm between climate change and natural hazard knowledge and public opinion and policy. At this junction of science and society, 17 chapters take a proactive and prescriptive approach to communicating with the public, the media, and policy makers about the importance of Earth science in everyday life. Book chapters come from some 40 authors who are geophysical scientists, social scientists, educators, scholars, and professionals in the field. Bringing diverse perspectives, these authors hail from universities, and research institutes, government agencies, non-profit associations,

and corporations. They represent multiple disciplines, including geosciences, education, climate science education, environmental communication, and public policy. They come from across the United States and around the world. Arranged into five sections, the book looks at geosciences communication in terms of: 1) Education 2) Risk management 3) Public discourse 4) Engaging the public 5) New media From case studies and best practices to field work and innovations, experts deliver pragmatic solutions and delve into significant theories, including diffusion, argumentation, and constructivism, to name a few. Intended for environmental professionals, researchers, and educators in the geophysical and social sciences, the book emphasizes communication principles and practices within an up-to-the-minute context of new environmental issues, new technologies, and a new focus on resiliency.

fort worth museum of science and history events: Connecting with Our Ancestors: Human Evolution Museum Experiences Shelley L. Smith, 2024-09-29 This book combines documentation and analysis of the contents of exhibits in 12 museums (Part 1) with interviews with experts involved in the creation of exhibits (Part 2) to explore variation in human evolution exhibits. To be successful, museum exhibits must make a personal connection with visitors, inspiring them to learn more. Human evolution exhibits thus need contemporary relevance. It is crucial to find ways to bind our deep past to our lives today. Presenting our story, and our collective history, some human evolution exhibits reach an audience of millions each year. An understanding of evolution is fundamental to modern biology, and a lack of knowledge of basic principles has practical consequences, including impairing reception of health messages. The goal of the volume is to stimulate discussion of how the presentation of evolution, and in particular human evolution, can be improved, contributing to scientific literacy and engagement with evolutionary science. To enhance relevance to a broader public, the author argues that incorporation of evolutionary medicine and clearer explanations of ancestry and human biological variation are needed. The surveyed museums include four in Texas, the author's home state, seven additional renowned U.S. museums, and the Natural History Museum in London. Some of the 35 interviewees are prominent academic researchers; other contribute their expertise in design, art, and education. Topics discussed include exhibit content and changing exhibits, the ideal vs. reality in exhibit creation, self-assessments of exhibits, education and "edutainment," and exhibit content intersections with religion, politics, and the history of representations of race / human biological variation. A bibliographic essay, appendices, and text boxes provide additional information for readers desiring more in-depth study. This volume is of interest to a wide range of readers in anthropology, museum studies, and science communication.
