foundation basics answer key: *The Teaching of Science in Primary Schools* Wynne Harlen OBE, Anne Qualter, 2017-08-04 The Teaching of Science in Primary Schools provides essential information for all concerned with primary school education about all aspects of teaching science. It pays particular attention to inquiry-based teaching and learning because of the more general educational benefits that follow from using this approach. These benefits are often expressed in terms of developing general scientific literacy and fostering the ability to learn and the motivation to continue learning. This book also aims to help teachers focus on the 'big' or powerful ideas of science rather than teaching a series of unrelated facts. This leads children to an understanding of the nature, and limitations, of scientific activity. This fully expanded and updated edition explores: The compelling reasons for starting science in the primary school. Within-school planning in the context of less prescriptive national requirements. The value of having in mind the 'big ideas' of science. The opportunities for children to learn through greater access to the internet and social networking. The expanding sources of materials and guidance now available to teachers on-line. Greater attention to school and teacher self-evaluation as a means of improving provision for children's learning. The importance for both teachers and learners of reflecting on the process and content of their activities. Other key aspects of teaching, such as:- questioning, the importance of discussion and dialogue, the formative and summative roles of assessment and strategies for helping children to develop understanding, skills, positive attitudes and enjoyment of science, are preserved. So also is the learner-centred approach with an emphasis on children learning to take some responsibility for their activities. This book is essential reading for all primary school teachers and those on primary education courses.

foundation basics answer key: *Deradicalising Violent Extremists* Hamed El-Said, Jane Harrigan, 2018-10-24 Terrorism remains one of the major threats facing the world community. While literature on the subject is dominated by discussion of the factors leading individuals and groups to join violent extremist, terrorist groups, the question of what can lead them to disengage from such groups is an equally important one. This book is the first study to provide a detailed analysis of both counter-radicalization and deradicalization programmes in eight Muslim-majority states, representing hitherto one of the largest, detailed, and most systematic inventory of such programmes in the world. Drawing on detailed case-studies from a number of countries, the book: traces the historical evolution of violent extremist groups and individuals in each country case study, including the period before independence; describes in detail states' response to this phenomenon in each period; provides important empirical analyses for counter-and-deradicalization policies and programmes based on extensive fieldwork and interviews with state officials, former radicals, and members of civil society organizations in each country; provides a first systematic evaluation of the effectiveness and success of these programmes and policies; focuses simultaneously on factors that have led to deradicalization at an individual or organizational level, and on the macro environment, both external-global and internal, that encourages counter-radicalization and deradicalization of groups and individuals. The detailed comparative analyses allow the reader to identify conditions, both internal and external, which are conducive to both success and failure of counter-radicalization and deradicalization programmes, and the authors identify best practice and provide policy implications for states facing threats from violent extremism, as well as for international institutions and organizations working in the field of counter-terrorism.

foundation basics answer key: Arabic Dialogues Rachel Mairs, 2024-03-04 During the nineteenth century and into the early twentieth century, more Europeans visited the Middle East than ever before, as tourists, archaeologists, pilgrims, settler-colonists and soldiers. These visitors engaged with the Arabic language to differing degrees. While some were serious scholars of Classical Arabic, in the Orientalist mould, many did not learn the language at all. Between these two extremes lies a neglected group of language learners who wanted to learn enough everyday colloquial Arabic to get by. The needs of these learners were met by popular language books, which boasted that they could provide an easy route to fluency in a difficult language. Arabic Dialogues explores the motivations of Arabic learners and effectiveness of instructional materials, principally in Egypt and Palestine, by analysing a corpus of Arabic phrasebooks published in nine languages (English, French, German, Spanish, Portuguese, Italian, Yiddish, Hebrew, Russian) and in the territory of twenty-five modern countries. Beginning with Napoleon's Expédition d'Égypte (1798-1801), it moves through the periods of mass tourism and European colonialism in the Middle East, concluding with the Second World War. The book also considers how Arab intellectuals understood the project of teaching Arabic to foreigners, the remarkable history of Arabic-learning among Yiddish- and Hebrew-speaking immigrants in Palestine, and the networks of language learners, teachers and plagiarists who produced these phrasebooks.
