Sharing physical copies with friends also allows for easy multiplayer experiences without requiring multiple digital purchases.

forza horizon 5 physical: Traveling through Video Games Tom van Nuenen, 2023-10-30

This book unlocks an understanding of video games as virtual travel. It explains how video game design increasingly takes cues from the promotional language of tourism, and how this connection raises issues of power and commodification. Bridging the disciplinary gap between game and tourism studies, the book offers a comprehensive account of touristic gazing in games such as *The Legend of Zelda: Breath of the Wild*, *Minecraft*, and *Microsoft Flight Simulator 2020*. Traveling through video games involves a mythological promise of open-ended opportunity, summarized in the slogan you can go there. Van Nuenen discusses the scale of game worlds, the elusive nature of freedom and control, and the pivotal role of work in creating a sense of belonging. The logic of tourism is fundamentally consumptive—but through design choices, players can also be invited to approach their travels more critically. This is the difference between moving through a game world, and being moved by it. This interdisciplinary and innovative study will interest students and scholars of digital media studies, game studies, tourism and technology, and the Digital Humanities.

forza horizon 5 physical: Geo-epistemology Claudio Canaparo, 2009 This book is about the formation and development of Latin America as name, idea and concept, as well as the wider concepts of location, knowledge and the relationship between them. Latin America is not only a subject or an academic construct, it is also a perspective from which subjectivities are established, knowledge is developed and narratives are produced. This study argues that epistemology cannot exist in abstract terms, despite traditional academic arguments to the contrary. Therefore the author uses 'Latin America' to anchor his more general arguments in a particular location and calls this approach 'geo-epistemology'. The author discusses how the specificity of a particular location can contribute to the establishment of both a method of formulating human knowledge and the boundaries of what can be known. The text explores the relationship between philosophy, geography and geometry, and analyses the notions of science, empire and colonialism. In response to the contemporary debate on 'space of thinking', the author proposes a new concept of 'reversal thinking', which leads to an examination of the roles of language and writing from an epistemic point of view.

inanimate entities and technological artefacts, new identities are formed and a new epistemological and ethical approach to reality is needed. Through twelve thought-provoking, scholarly essays, this volume analyzes works by a range of modern and contemporary Italian authors, from Giacomo Leopardi to Elena Ferrante, who have captured the shift from anthropocentrism and postmodernism to posthumanism. Indeed, this is the first academic volume investigating narrative configurations of posthuman identity in Italian literature and film.
