fox 17 problem solvers: Coordination of Distributed Problem Solvers Edmund H. Durfee, 2012-12-06 As artificial intelligence (AI) is applied to more complex problems and a wider set of applications, the ability to take advantage of the computational power of distributed and parallel hardware architectures and to match these architectures with the inherent distributed aspects of applications (spatial, functional, or temporal) has become an important research issue. Out of these research concerns, an AI subdiscipline called distributed problem solving has emerged. Distributed problem-solving systems are broadly defined as loosely-coupled, distributed networks of semi-autonomous problem-solving agents that perform sophisticated problem solving and cooperatively interact to solve problems. Nodes operate asynchronously and in parallel with limited internode communication. Limited internode communication stems from either inherent bandwidth limitations of the communication medium or from the high computational cost of packaging and assimilating information to be sent and received among agents. Structuring network problem solving to deal with consequences of limited communication-the lack of a global view and the possibility that the individual agents may not have all the information necessary to accurately and completely solve their subproblems-is one of the major focuses of distributed problem-solving research. It is this focus that also is one of the important distinguishing characteristics of distributed problem-solving research that sets it apart from previous research in AI.

fox 17 problem solvers: Elliptic Problem Solvers Garrett Birkhoff, Arthur Schoenstadt, 2014-05-10 Elliptic Problem Solvers, II covers the proceedings of the Elliptic Problem Solvers Conference, held at the Naval Postgraduate School in Monterey, California from January 10 to 12, 1983. The book focuses on various aspects of the numerical solution of elliptic boundary value problems. The selection first offers information on building elliptic problem solvers with ELLPACK; presentation and evolution of the club module; and a fourth order accurate fast direct method for the Helmholtz equation. The text then examines the ITPACK project, CMMPAK, solving elliptic problems on an array processor system, and parallel architectures for iterative methods on adaptive, block structured grids. Topics include adaptive solution algorithm, data structure, elliptic problem solvers, input data, and vector ITPACK. The publication ponders on conjugate gradient preconditioners for vector and parallel processors; an algebra for systolic computation; and an incomplete-Cholesky factorization by a matrix partition algorithm. The book also tackles the numerical solution of a model equation near the onset of the Rayleigh-Benard instability; numerical methods for solving coupled semiconductor equations on a minicomputer; and analysis of nonlinear elliptic systems arising in reaction/diffusion modeling. The selection is highly recommended for researchers interested in elliptic problem solvers.

fox 17 problem solvers: *Dangerous Decisions* E. Mumford, 2007-08-28 In a world where technology is continually advancing, and problems are becoming more and more complex, established practices for decision making and problem solving are no longer effective. In this new book, however, Enid Mumford draws on her wealth of experience in management, business schools, and working with the police and other professional problem solvers to show us how to tackle complex problems efficiently. With drugs and cyber-crime as her main examples Professor Mumford shows how these topical, yet apparently permanent problems, could be approached. She does this by looking at how the criminals themselves have overcome legal obstacles, and other problems to make the drug trafficking industry the second largest in the world today, and the relative newcomer, electronic fraud, a multi-billion dollar problem already. These crimes, which in themselves lead to more crime from petty theft to support a drug habit, to international money laundering, are incredibly complex, and yet the book shows us that there is not only a way forward with these issues, but a way to approach all complex problems with efficiency and competency, wherever they occur in our lives.

fox 17 problem solvers: Multi-Agent Systems and Applications Michael Luck, Vladimir Marik, Olga Stepankova, Robert Trappl, 2003-05-15 The Advanced Course on Artificial Intelligence ACAI 2001 with the subtitle Multi-Agent Systems and Their Applications , held in Prague, Czech Republic, was a joint event of ECCAI (the European Coordinating Committee for Artificial Intelligence) and AgentLink, the European Network of Excellence for Agent-Based Computing. Whereas ECCAI organizes two-week ACAI courses on different topics every second year, AgentLink's European Agent Systems Summer School (EASSS) has been an annual event since 1999. This year,

both of these important events were merged together, giving weight to the fact that multi-agent systems currently represent one of the hottest topics in AI research. The name, ACAI 2001 Summer School, is intended to emphasize that this event continues the tradition of regular ECCAI activities (ACAI), as well as the EASSS summer schools of AgentLink. The Prague ACAI Summer School was proposed and initiated by both the Gerstner Laboratory, Czech Technical University, Prague (GL-CTU) and the Czech Society for Cybernetics and Informatics (CSKI), with the support of the Austrian Research Institute for Artificial Intelligence in Vienna (OFAI). Part of our motivation was catalyzed by experience gained in 1992 during the International Summer School Advanced Topics in Artificial Intelligence (see Springer's LNAI vol. 617) which was organized by the same Czech and Austrian bodies. One of the most important stimulating factors behind the organization of ACAI 2001 was the support provided by the European Commission to the Gerstner Laboratory within the frame of the MIRACLE Center of Excellence project (IST No.

fox 17 problem solvers: Advancing Proactive Policing Jon Shane, 2025-04-15 This brief documents a demonstration project undertaken in Ocean View, Delaware on a novel, scalable tool for police agencies seeking to optimize their patrol operations while providing transparency and accountability in resource management. It describes and explains the broader set of circumstances, conditions, and factors that surrounded and influenced the Ocean View Police Department's goal to expand the agency toward proactive policing. This work encompasses the social, economic, political, and technical aspects that affected the design, implementation, and outcome. The central research question was: If the Ocean View Police Department increases proactive time from 67% to 75%, then how many officers do we need, and what are the projected costs? The study offers a roadmap for agencies looking to expand their proactive policing efforts, and understand the cost drivers associated with the patrol function. The book details the demands that police agencies face and the complexities of their work. The chapters that follow acknowledge the managerial and fiscal difficulties related to staffing and funding the police, while simultaneously offering suggestions for increased community collaboration. The universal model presented here can be used by all police executives, elected and appointed city officials, academics, finance and directors, analysts.

fox 17 problem solvers: Decentralized A.I., 2 Y. Demazeau, J.-P. Müller, 1991-12-04 The purpose of this proceedings is to stimulate exchange and discussion of research in the field of multi-agent systems. A multi-agent system consists of at least two agents that are engaged in some task that may require coordination, cooperation and/or competition. An autonomous agent has its own goals, capabilities and knowledge. The actions of an agent occur in the context of other agents that may have structures and strategies different from the agent's own. Multi-agent problems arise when several autonomous agents share a common environment. These problems may result from limited resources, shared or competing goals, etc. This MAAMAW workshop proceedings emphasizes multi-agent systems of all sorts from very simple to very complex agents and agent organizations.

Satofuka, Jacques Periaux, 1999-05-26 This book contains the papers presented at the Parallel Computational Fluid Dynamics 1998 Conference. The book is focused on new developments and applications of parallel technology. Key topics are introduced through contributed papers and invited lectures. These include typical algorithmic developments, such as: distributed computing, domain decomposition and parallel algorithm. Some of the papers address the evaluations of software and machine performance and software tool environments. The application of parallel computers to complex fluid dynamics problems are also conveyed through sessions such as

DNS/LES, combustion and reacting flows, industrial applications, water resources and environmental flows. The editors believe this book will provide many researchers, much beyond those contributing to this volume, with fresh information and reference.

fox 17 problem solvers: Readings in Distributed Artificial Intelligence Alan H. Bond, Les Gasser, 2014-06-05 Most artificial intelligence research investigates intelligent behavior for a single agent--solving problems heuristically, understanding natural language, and so on. Distributed Artificial Intelligence (DAI) is concerned with coordinated intelligent behavior: intelligent agents coordinating their knowledge, skills, and plans to act or solve problems, working toward a single goal, or toward separate, individual goals that interact. DAI provides intellectual insights about organization, interaction, and problem solving among intelligent agents. This comprehensive collection of articles shows the breadth and depth of DAI research. The selected information is relevant to emerging DAI technologies as well as to practical problems in artificial intelligence, distributed computing systems, and human-computer interaction. *Readings in Distributed Artificial Intelligence* proposes a framework for understanding the problems and possibilities of DAI. It divides the study into three realms: the natural systems approach (emulating strategies and representations people use to coordinate their activities), the engineering/science perspective (building automated, coordinated problem solvers for specific applications), and a third, hybrid approach that is useful in analyzing and developing mixed collections of machines and human agents working together. The editors introduce the volume with an important survey of the motivations, research, and results of work in DAI. This historical and conceptual overview combines with chapter introductions to guide the reader through this fascinating field. A unique and extensive bibliography is also provided.
