free anger management programs nyc: *Aviation Psychology in Practice* Neil Johnston, Nick McDonald, 2017-09-29 This book seeks to extend the boundaries of aviation psychology in two interrelated ways: by broadening the focus of aviation psychology beyond the flight deck to the whole aviation system; and by discussing new theoretical developments which are shaping this applied discipline. A key feature of these theoretical advances is that they are grounded in a more

developed, ecologically valid, understanding of practice. Among the issues addressed in this new integration of theory and practice are the following: what goes on in the flight deck is dependent on the wider organisational context; human factors issues in aircraft maintenance and grounding are critical to aviation safety; our capacity to learn from aviation accidents and incidents needs to be supported by more systematic human factors investigation and research; we must also develop our understanding of the human factors of accident survival as well as accident prevention; theories of crew coordination and decision making must be supported by an analysis of how decisions are actually made in the real world with all its stresses and constraints; training should be grounded in a thoroughgoing analysis of the complexity of the job and a full understanding of the training process itself. The text will be of interest to human factors researchers and practitioners in aviation and related areas. It will be of particular relevance to those who have a role in training, management or regulation throughout the aviation system.

The book features chapter contributions by highly experienced and well-known experts on using hypnosis to treat specific forms of depression, with assessment and intervention strategies as well as sample transcripts of the use of hypnosis in therapy sessions. It discusses both broad and targeted applications of hypnosis in treatment, the treatment of depression with hypnosis in special populations, as well as special considerations regarding hypnotic treatment. free anger management programs nyc: Set to See Us Fail Viola Castellano, 2023-03-10 Examining the interaction between families and professionals in the child welfare system of New York, this book focuses on how inequalities are reproduced, measured, managed, and contested. The book describes how state institutions and neoliberal governance police the groups which are most represented in the child welfare system, including low income, female-headed families living in racialized neighborhoods. The book also shows how these forms of policing produce unstable terrains, and give rise to contestation among families, communities, and professionals. It questions and re-thinks how state welfare and protection is administered.
