Harry E Gove, 2024-11-01 Interest in the Turin Shroud continues to the present day even though it was finally carbon dated in 1988 and shown not to be of an age consistent with Christ's burial. Scientifically, the age of the shroud cloth is of little consequence, but to the general public, it is of considerable significance. The author Harry E. Gove is a co-inventor of accelerator mass spectrometry and was responsible for its use in establishing whether the Turin Shroud could have been Christ's burial cloth. **Relic, Icon or Hoax?: Carbon Dating the Turin Shroud** presents an eyewitness account of the events that culminated in the final determination of the age of the linen cloth of the Turin Shroud and some of the subsequent reactions to the results. The book discusses the application of accelerator mass spectrometry to the carbon dating of the Turin Shroud using samples only a few square centimeters in area and weighing only a few tens of milligrams.

icon san antonio research: Icon, Cult, and Context Maura K. Heyn, Ann Irvine Steinsapir, 2016-12-31 This festschrift honors UCLA professor emerita Susan Downey and her meticulous scholarship on religious architecture and imagery in the Roman/Hellenistic world. The iconography of gods and goddesses, the analysis of sacred imagery in the context of ancient cult practices, and the design and decoration of sacred spaces are the main themes of the book. Authors examine such subjects as painting from Dura-Europos, Hellenistic sculpture at Saqqara in Egypt, Roman cameo glass, Pompeian fresco, and aspects of Venus in portrait sculpture. The essays on Dura-Europos are especially valuable in light of the present turmoil in the region. Professor Downey's influence shines through in these discussions, which echo her mentorship of several generations of art history and archaeology students and recognize her scholarly achievements. The broad temporal and geographic parameters of the volume are expansive, and the juxtaposition of images and analyses leads to surprising new conclusions.

Five hundred years after her death, her image and legacy remain relevant to conversations around female empowerment, indigeneity, and national identity throughout the Americas. This lavish book establishes and examines her symbolic import and the ways in which artists, scholars, and activists through time have appropriated her image to interpret and express their own experiences and agendas from the 1500s through today.

icon san antonio research: The New Downtown Library Shannon Christine Mattern, 2007 The past twenty years have seen a building boom for downtown public libraries. From Brooklyn to Seattle, architects, civic leaders, and citizens in major U.S. cities have worked to reassert the relevance of the central library. While the libraries' primary functions—as public spaces where information is gathered, organized, preserved, and made available for use—have not changed over the years, the processes by which they accomplish these goals have. These new processes, and the public debates surrounding them, have radically influenced the utility and design of new library buildings. In *The New Downtown Library*, Shannon Mattern draws on a diverse range of sources to investigate how libraries serve as multiuse public spaces, anchors in urban redevelopment, civic icons, and showcases of renowned architects like Rem Koolhaas, Cesar Pelli, and Enrique Norton. Mattern's clear and careful analysis reveals the complexity of contemporary dialogues in library design, highlighting the roles that staff, the public, and other special interest groups play. Mattern also describes how the libraries manifest changing demographics, new ways of organizing collections and delivering media, and current philosophies of librarianship. By identifying unifying themes as well as examining the differences among various design projects, Mattern brings to light the social forces, as well as their architectural expressions, that form the essence of new libraries and their vital place in public life. Featured libraries are located in Brooklyn, Cincinnati, Cleveland, Chicago, Denver, Los Angeles, Minneapolis, Nashville, New York, Phoenix, Salt Lake City, San Antonio, San Francisco, Seattle, and Toledo. Shannon Mattern is assistant professor of media studies and film at The New School.

This book provides an unprecedented synthesis of the current status of scientific and management knowledge regarding global rangelands and the major challenges that confront them. It has been organized around three major themes. The first summarizes the conceptual advances that have occurred in the rangeland profession. The second addresses the implications of these conceptual advances to management and policy. The third assesses several major challenges confronting global rangelands in the 21st century. This book will compliment applied range management textbooks by describing the conceptual foundation on which the rangeland profession is based. It has been written to be accessible to a broad audience, including ecosystem managers, educators, students and policy makers. The content is founded on the collective experience, knowledge and commitment of 80 authors who have worked in rangelands throughout the world. Their collective contributions indicate that a more comprehensive framework is necessary to address the complex challenges confronting global rangelands. Rangelands represent adaptive social-ecological systems, in which societal values, organizations and capacities are of equal importance to, and interact with, those of ecological processes. A more comprehensive framework for rangeland systems may enable management agencies, and educational, research and policy making organizations to more effectively assess complex problems and develop appropriate solutions.
