ideas for a biology research project: Human Work Interaction Design: Designing for Human Work Torkil Clemmensen, Pedro Campos, Rikke Orngreen, Annelise Mark Pejtersen, William Wong, 2006-12-31 This book records the very first Working Conference of the newly established IFIP Working Group on Human-Work Interaction Design, which was hosted by the University of Madeira in 2006. The theme of the conference was on synthesizing work analysis and design sketching, with a particular focus on how to read design sketches within different approaches to analysis and design of human-work interaction. Authors were encouraged to submit papers about design sketches - for interfaces, for organizations of work etc. - that they themselves had worked on. During the conference, they presented the lessons they had learnt from the design and evaluation process,

citing reasons for why the designs worked or why they did not work. Researchers, designers and analysts in this way confronted concrete design problems in complex work domains and used this unique opportunity to share their own design problems and solutions with the community. To successfully practice and do research within Human - Work Interaction Design requires a high level of personal skill, which the conference aimed at by confronting designers and work analysts and those whose research is both analysis and design. They were asked to collaborate in small groups about analysis and solutions to a common design problem.

ideas for a biology research project: International Women in Science Catherine M.C. Haines, 2001-11-20 A comprehensive biographical guide to the scientific achievements, personal lives, and struggles of women scientists from around the globe. International Women in Science: A Bibliographical Dictionary to 1950 presents the enormous contributions of women outside North America in fields ranging from aviation to computer science to zoology. It provides fascinating

profiles of nearly 400 women scientists, both renowned figures like Florence Nightingale and Marie Curie and women we should know better, like Rosalind Franklin, who, along with James Watson and Francis Crick, uncovered the structure of DNA. Students and researchers will see how the lives of these remarkable women unfolded, and how they made their place in fields often stubbornly guarded by men, overcoming everything from limited education and professional opportunities, to indifference, ridicule, and cultural prejudice, to outright hostility and discrimination. Included are a number of living scientists, many of whom provide insights into their lives and scientific times. Those contributions, plus additional previously unavailable material, make this a volume of unprecedented scope and richness.

ideas for a biology research project: Collaborative Spaces at Work Fabrizio Montanari, Elisa Mattarelli, Anna Chiara Scapolan, 2020-12-28 Collaborative spaces are more than physical locations of work and production. They present strong identities centered on collaboration, exchange, sense of community, and co-creation, which are expected to create a physical and social atmosphere that facilitates positive social interaction, knowledge sharing, and information exchange. This book explores the complex experiences and social dynamics that emerge within and between collaborative spaces and how they impact, sometimes unexpectedly, on creativity and innovation. *Collaborative Spaces at Work* is timely and relevant: it will address the gap in critical understandings of the role and outcomes of collaborative spaces. Advancing the debate beyond regional development rhetoric, the book will investigate, through various empirical studies, if and how collaborative spaces do actually support innovation and the generation of new ideas, products, and processes. The book is intended as a primary reference in creativity and innovation, workspaces, knowledge and creative workers, and urban studies. Given its short chapters and strong empirical orientation, it will also appeal to policy makers interested in urban regeneration, sustaining innovation, and social and economic development, and to managers of both collaborative spaces and companies who want to foster creativity within larger organizations. It can also serve as a textbook in master's degrees and PhD courses on innovation and creativity, public management, urban studies, management of work, and labor relations.
