ideas for psychology project: Challenging Future Practice Possibilities Joy Higgs, Steven Cork, Debbie Horsfall, 2019-03-25 "What might the futures of practice be like?" is far from a straightforward question. Emphasising the before the word future, implies one future. But futures thinkers have identified a range of futures that people think about. In this book we reflect on possible, probable, and preferable futures in relation to practice and work. Readers are invited to

consider how their own engagement in shaping possible futures will support ways of working that they deem preferable, even those they can hardly imagine. Challenging Future Practice Possibilities also examines influences that are maintaining the status quo and others that are pushing interest-driven change. Authors consider the major challenges that practice and practitioners face today such as wicked problems, fears for the future and complex demands and opportunities posed by the digital revolution. A number of examples of future-oriented work directions such as protean careers and artificial intelligence enhancing or even replacing human workforces, are considered along with concerns like the vulnerability of many work situations and workers. In some cases workers and employers alike are unprepared for these challenges, while others see adapting to these situations as yet another pathway of practice futures evolution.

ideas for psychology project: Wilfred Bion and Literary Criticism Naomi Wynter-Vincent, 2021-12-08 Wilfred Bion and Literary Criticism introduces the work of the British psychoanalyst, Wilfred Bion (1897–1979), and the immense potential of his ideas for thinking about literature, creative process, and creative writing. There is now renewed interest in Bion's work following the publication of his Complete Works but the complexities of his theory and his distinctive style can be forbidding. Less well-known than Freud or Lacan, the work of Wilfred Bion nevertheless offers new insights for psychoanalytic literary criticism and creative writing. For newer readers of his work, this book offers an engaging introduction to several of Bion's key ideas, including his theory of thinking (the 'thought without a thinker'), the container/contained relationship, alpha-function; alpha-elements, beta-elements, and bizarre objects; K and -K; the Grid, O, and the caesura. It also offers a way in to Bion's astonishing and challenging experimental work, A Memoir of the Future, and explores the impact of his devastating personal experiences as an officer during the First World War. Each chapter of Wilfred Bion and Literary Criticism draws on one or more specific aspects of Bion's theory in relation to creative texts by Sigmund Freud, Stevie Smith, B.S. Johnson, Mary Butts, Jean Rhys, Nicholas Royle, J.G. Ballard, and Wilfred Bion himself. The first full-length study to explore the potential of Bion's ideas for literary criticism, Wilfred Bion and Literary Criticism introduces his complex and extensive work for a new audience in an accessible and engaging way, and will be of great interest to scholars of creative writing, literary criticism, and psychoanalysis.
