maya exhibit california science center dates 2023: The Maya and Climate Change

Kenneth E. Seligson, 2023 One of the most well-known things about the Classic Maya civilization is that it collapsed, which leads to many questions about what happened. Geared toward a general audience, this book argues that Classic Maya civilization did not in fact collapse in the literal sense of the word. Instead, it shifts the focus to the 700-plus years of societal growth and environmental conservation that preceded the transformation of Maya civilization about 1,000 years ago. Drawing on archaeological, environmental, and historical evidence, it explores the many ways that Maya communities addressed the challenges of climate change and other tropical environment stressors.

maya exhibit california science center dates 2023: Flourishing in Museums Kiersten F.

Latham, Brenda Cowan, 2023-12-19 Flourishing in Museums presents the Flourishing Museum Framework, an interdisciplinary model for reflection and practice. Illustrated via a diversity of international examples, the framework demonstrates how museums can meaningfully address the many challenges facing the profession. Including contributions from a wide range of scholar-practitioners working across the arts, humanities, sciences, education, business, and mental health disciplines, the volume uses abundance-thinking and takes a strengths-based appreciative approach to museum purpose, function, and being. The book demonstrates that, even within the most difficult climates, abundance-oriented methods and perspectives can inspire and elicit flourishing in visitors, staff, and communities, thus positioning museums as places where people find meaningful and purposeful work and where visitors find satisfaction, meaning, inspiration, and motivation. Drawing from the disciplines of positive psychology, positive organizational scholarship, contemplative studies, and museum studies, the book is unified and organized into six thematic areas that comprise the Flourishing Museum Framework: courage, transformation, care, optimism, gratitude, and delight. Flourishing in Museums will be essential reading for academics and students working in the museum and heritage fields, as well as the cognate disciplines of arts management and creative industries. It will also be useful to practitioners working in museums and heritage sites around the world.

maya exhibit california science center dates 2023: Deep Horizons Brianne Cohen,

2023-09-15 The specifics of ecological destruction often take a cruel turn, affecting those who can least resist its impacts and are least responsible for it. Deep Horizons: A Multisensory Archive of Ecological Affects and Prospects gathers contributions from multiple disciplines to investigate intersectional questions of how the changing planet affects specific peoples, communities, wildlife species, and ecosystems in varying and inequitable ways. A multisensory, artistic-archival supplement to the Mellon Sawyer Environmental Futures Project, the volume enriches current conversations bridging the environmental humanities and affect theory with insights from Native and Indigenous philosophies as well as by highlighting artistic practices that make legible the long-term durational effects of ecological catastrophe. Poems, nonfiction essays, sound-texts, photographs, and other artworks invite readers and viewers to consider the less visible losses and prospects of environmental transformation. Gathering contributions from multiple disciplines, this multimodal, multisensorial volume pushes the boundaries of scholarship with an experimental, born-digital format that offers a set of responses to collective traumas such as climate change, environmental destruction, and settler colonialism. The artists and authors honor the specificity of real historical and material injustices while also reflecting the eclectic nature of such assorted

feelings, working through them in creative and border-crossing modes. With contributions from Robert Bailey, Nina Elder, Erin Espelie, Hock E Aye Vi Edgar Heap of Birds, Maya Livio, Erika Osborne, Craig Santos Perez, Kim Tallbear, Julianne Warren, and Kyle Powys White. The compelling juxtaposition of poetry, music, video, audio, photography, printmaking, and traditional essays is among Deep Horizons' considerable strengths. I don't know of any other project quite like this one. The subject is timely—indeed, urgent—and the innovative approach to archiving environmental change will interest scholars and artists in a range of disciplines and resonate with a wide audience.

maya exhibit california science center dates 2023: Full Spectrum Elena Manferdini, Jasmine Benyamin, 2023-12-18 Colour is architecture's sharpest tool in the box. It has indexed everything from the feminine, cosmetic and vulgar to the pure, intrinsic and embodied. Colour has played a central role in the history of architecture. From the polychromy of the ancients to the great white interiors of high modernism. The figurative flourishes of postmodernism to the embedded sublime of contemporary building systems and facades. In contemporary architecture, colour has emerged as something powerful, both a mode of working and a political proposition. The second digital age has brought a fundamental shift in how architects engage colour. Employing the full range of colour puts forth a projective mode of action. It aids the democratisation of visual culture: opening the field to enable subjectivities, bring in new references and embrace new voices. This book explores the function of colour in contemporary architecture and argues it is not to present a vision of an idealised other world, but to prompt new imaginaries. Take in the full spectrum. Features: 100 Architects, Maya Alam, David Batchelor, Galo Canizares, Courtney Coffman, Fala Atelier, Marcelyn Gow, Sauerbruch Hutton, Sam Jacobs, Carolyn Kane, Guto Requena, Paulette Singley, Amanda Williams and Mimi Zeiger.

maya exhibit california science center dates 2023: Ch'ul Mut Maruch Méndez Pérez, Diane Rus, 2023-11-01 Tsotsil-Maya elder, curer, singer, and artist Maruch Méndez Pérez began learning about birds as a young shepherdess climbing trees and raiding nests for eggs to satisfy her endless hunger. As she grew into womanhood and apprenticed herself to older women as a curer and seer, the natural history of birds she learned so roughly as a child expanded to include ancestral Maya beliefs about birds as channels of communication with deities in the spirit world who had dominion over human lives. In these testimonies dictated to her lifelong friend, anthropologist Diane Rus, Méndez Pérez describes her years of dreams, instruction, and experience. Her narrative sheds light on the basic values of her Chamula culture and cosmovision and has remarkable parallels to concepts of the ancient Maya as interpreted by scholars.

maya exhibit california science center dates 2023: Engaging Anthropological Theory Mark Moberg, 2024-09-30 The updated third edition of this book critically reconsiders the history of anthropological theory. Covering key concepts and theorists in a lively style, Engaging Anthropological Theory examines the historical context of anthropological ideas and the contested nature of anthropology itself. The book illustrates how anthropological ideas about human diversity are rooted in historical conditions, including the West's relationship with colonized societies and the politics of scholarly inquiry itself. Exploring anthropological ideas in context helps students understand how they evolved and how they relate to society and history. This new edition pays close attention to non-canonical figures and scholars of color whose contributions are too often bypassed in disciplinary histories. Students and instructors will also appreciate the open-ended review questions for each chapter that stimulate critical thought and discussion. Extensively illustrated throughout, this engaging text moves away from the dry recitation of past viewpoints in anthropology and shows their continued relevance to modern life.

maya exhibit california science center dates 2023: Scenes of Attention D. Graham Burnett, Justin E. H. Smith, 2023-11-14 Are we paying enough attention? At least since the nineteenth century, critics have alleged a widespread and profound failure of attentiveness—to others, to ourselves, to the world around us, to what is truly worthy of focus. Why is there such great anxiety over attention? What is at stake in understanding attention and the challenges it faces? This book
