Higher education has been an important part of this process. The accelerated pace of technological, socio-economic, and business innovations as well as ongoing fundamental changes in the real world call for progress in pedagogy. While modern universities have adapted in various degrees through information platforms such as Blackboard or Brightspace, video conferencing, and other technological innovations, they still commonly rely on pedagogical ideas and concepts rooted in a thoroughly pre-modern era rooted in medieval times. *Global Trends, Dynamics, and Imperatives for Strategic Development in Business Education in an Age of Disruption* explores the genesis of higher education and its contemporary structure and profile in major global regions and discusses key trends, dynamics, drivers, and developmental imperatives currently shaping business education. Covering topics such as business education, online education, and strategic development, this book is essential for teachers, managers, trainers, faculty, administrators, policymakers, researchers, academicians, and students involved in studies that include industrial, economic, social, urban, innovation, legal, and policy development.

mays business study abroad: Developments in Virtual Learning Environments and the Global Workplace Swartz, Stephanie, Barbosa, Belem, Crawford, Izzy, Luck, Susan, 2021-06-11 Although institutions of higher education have recognized the need for preparing their graduates for a digitalized, global workplace, these efforts have been sporadic, individualized, and varied from discipline to discipline. Nevertheless, over the past 10 years, trends such as "double classrooms," "inverted classrooms," and "collaborative online international learning" (COIL) have gained traction at universities across the globe. With the emergence of the COVID-19 pandemic in 2020, efforts to engage students in the use of digital tools and virtual collaborative teamwork increased tenfold. Creative and innovative virtual learning environments (VLEs) have emerged, and instructors have used them to connect with their students much more frequently. The holistic nature of virtual learning, its impact on employability, and the development of global citizenry have become prime areas of research amongst the digital education landscape. Now more than ever, it is essential to look at virtual learning environments and how they can be used to prepare students and employees for the opportunities and challenges of a global, digital workplace. *Developments in Virtual Learning Environments and the Global Workplace* provides readers with a rationale and tool kit for facilitating virtual learning in a wide variety of contexts in response to the opportunities and challenges presented by the digital global workplace. This book covers virtual learning practices, the value of virtual learning for professionals and employers, and the best practices in online learning in different settings. Additionally, the chapters dive into the future perspectives and trends within virtual learning environments and the creation/evaluation of virtual learning strategies. These insights range from diverse countries, education levels, industry sectors, and academic disciplines, making this book a comprehensive research tool. This book will greatly benefit e-learning and instructional designers, university senior managers, university staff responsible for mobility and exchange, researchers, professionals responsible for organizational development and further education, human resource directors, global company executives, managers, practitioners, stakeholders, academicians, and students looking for information on how virtual learning environments are preparing students for the global workplace.

mays business study abroad: Elite MBA Programs at Public Universities Mimi Wolverton, Larry Penley, 2004-11-30 Business education programs should practice what they preach: applying the principles of strategic analysis to play to their strengths and develop distinctive offerings that attract the most profitable customers—in this case, students, faculty, local communities, and the institutions that support them financially. With the costs of private MBA programs skyrocketing, public universities, which generally operate out of the spotlight of the Harvards and Whartons, have a tremendous opportunity to distinguish themselves as centers of innovative, high-quality education. Mimi Wolverton and Larry Penley conducted extensive research to identify the qualities of those

public institutions across the country—from the University of Washington to Georgia Tech—that have successfully established competitive advantages, generally through a combination of cost leadership, differentiation, and focus. *Elite MBA Programs at Public Universities* features 12 in-depth case studies by senior representatives of the respective institutions, detailing the process by which they developed and launched programs to raise their profiles and ultimately compete aggressively for talent and support. From developing strategic alliances with local businesses and complementary academic departments to establishing online and overseas courses to investing in state-of-the-art facilities, these schools are setting new standards for business education—and measuring the positive results, for example, in terms of increased funding, higher faculty research productivity, higher rankings, and greater student diversity. Wolverton and Penley frame the case studies by applying the concepts of strategy theory, drawing lessons that can be applied in other educational institutions, as well as for students of strategy and general readers interested in emerging trends in business education. The result is a fascinating peek behind the scenes at the most innovative MBA programs, as well as a rich canvas for observing the principles of strategic management in action.
