Overview of MB-330 Exam

The MB-330 exam focuses on validating expertise in Microsoft Dynamics 365 Supply Chain Management, a critical module for businesses aiming to optimize their supply chain processes. Candidates are evaluated on their ability to implement and configure solutions that streamline manufacturing, inventory, procurement, and warehouse operations. The exam tests both theoretical knowledge and practical skills necessary for managing complex supply chains using Dynamics 365. Candidates should demonstrate proficiency in configuring product information, managing inventory levels, and overseeing production schedules, among other competencies. Understanding the exam format and question types also plays a role in effective preparation. The MB-330 exam is

part of the Microsoft Certified: Dynamics 365 Supply Chain Management certification path, which is highly valued in the IT and supply chain industries.

Product Information Management

Product Creation and Maintenance

Product information management is a foundational topic within the mb 330 exam topics, focusing on setting up and maintaining accurate product data in Dynamics 365. This includes creating product records, managing product attributes, and organizing products into categories for efficient processing. Candidates must understand how to configure product variants, units of measure, and pricing details to ensure consistency across supply chain operations.

Product Categories and Attributes

Effective categorization of products is essential for inventory and procurement processes. The exam covers the ability to define product categories and assign attributes that facilitate filtering and reporting. This helps in managing complex product portfolios and supporting demand forecasting and planning activities.

Inventory Management

Inventory Control and Transactions

Inventory management is a critical subject within the mb 330 exam topics, involving the control of stock levels and processing inventory transactions. Candidates must be familiar with different types of inventory adjustments, counting processes, and transaction posting. Understanding how to manage inventory journals and reconcile discrepancies is crucial for maintaining accurate stock records.

Inventory Valuation and Costing

The exam assesses knowledge of various inventory valuation methods, including FIFO, LIFO, and weighted average costing. Candidates should be able to configure costing versions and understand the impact of inventory transactions on financial records, ensuring alignment between supply chain and accounting systems.

Procurement and Sourcing

Vendor Management and Purchase Orders

Procurement processes are a significant component of mb 330 exam topics, focusing on managing vendor relationships and purchase order processing. The exam tests the ability to create vendor records, configure procurement policies, and manage purchase requisitions and orders. Candidates should demonstrate skills in vendor collaboration and contract management.

Procurement Categories and Workflows

Understanding procurement categories and associated workflows is essential for automating purchasing processes. The exam covers configuring approval workflows, setting up procurement categories, and managing purchase agreements to optimize sourcing activities and ensure compliance with organizational policies.

Manufacturing and Production Control

Production Orders and Scheduling

Manufacturing is a core topic in mb 330 exam topics, requiring candidates to demonstrate expertise in creating and managing production orders. This includes scheduling, releasing, and tracking production progress within Dynamics 365. Understanding capacity planning and resource allocation is vital for efficient production control.

Bill of Materials and Routing

The exam tests knowledge of configuring bills of materials (BOMs) and routing processes. Candidates should know how to define BOM structures, manage component substitutions, and set up routing sequences to ensure accurate production workflows and cost calculations.

Warehouse Management

Warehouse Setup and Configuration

Warehouse management is a prominent area within mb 330 exam topics, focusing on setting up warehouse locations, zones, and work templates. Candidates must understand how to configure warehouse policies, define picking and put-away strategies, and manage inventory locations to optimize warehouse operations.

Inbound and Outbound Processes

The exam covers the management of inbound and outbound warehouse processes, including receiving, shipping, and transfer orders. Knowledge of warehouse mobile device configurations and barcode scanning integration is essential for automating and streamlining warehouse activities.

Planning and Supply Chain Execution

Demand Forecasting and Master Planning

Planning is a vital section of mb 330 exam topics, emphasizing demand forecasting and master planning techniques. Candidates should be able to configure forecast models, manage sales orders, and generate master plans to align supply with demand effectively. Understanding different planning strategies such as MRP and MPS is critical.

Supply Chain Execution and Optimization

The exam assesses the ability to execute and optimize supply chain activities, including order fulfillment, transportation management, and vendor collaboration. Candidates must demonstrate skills in monitoring key performance indicators and implementing process improvements to enhance supply chain efficiency.

Lean Manufacturing and Quality Management

Lean Manufacturing Principles

Lean manufacturing is an advanced topic within the mb 330 exam topics, focusing on minimizing waste and optimizing production processes. Candidates should understand lean methodologies, including just-in-time production, kanban, and continuous improvement practices within the Dynamics 365 framework.

Quality Control and Compliance

Quality management is essential for maintaining product standards and regulatory compliance. The exam covers configuring quality orders, inspections, and nonconformance management. Candidates must demonstrate the ability to integrate quality processes seamlessly with production and warehouse operations.
