mccullough hyde physical therapy: *Loving with the Brain in Mind: Neurobiology and Couple Therapy* (Norton Series on Interpersonal Neurobiology) Mona DeKoven Fishbane, 2013-09-30 Facilitating change in couple therapy by understanding how the brain works to maintain—and break—old habits. Human brains and behavior are shaped by genetic predispositions and early experience. But we are not doomed by our genes or our past. Neuroscientific discoveries of the last decade have provided an optimistic and revolutionary view of adult brain function: People can change. This revelation about neuroplasticity offers hope to therapists and to couples seeking to improve their relationship. *Loving With the Brain in Mind* explores ways to help couples become proactive in revitalizing their relationship. It offers an in-depth understanding of the heartbreaking dynamics in unhappy couples and the healthy dynamics of couples who are flourishing. Sharing her extensive clinical experience and an integrative perspective informed by neuroscience and relationship science, Mona Fishbane gives us insight into the neurobiology underlying couples' dances of reactivity. Readers will learn how partners become reactive and emotionally dysregulated with each other, and what is going on in their brains when they do. Clear and compelling discussions are included of the neurobiology of empathy and how empathy and selfregulation can be learned. Understanding neurobiology, explains Fishbane, can transform your clinical practice with couples and help you hone effective therapeutic interventions. This book aims to empower therapists—and the couples they treat—as they work to change interpersonal dynamics that drive them apart. Understanding how the brain works can inform the therapist's theory of relationships, development, and change. And therapists can offer clients "neuroeducation" about their own reactivity and

relationship distress and their potential for personal and relational growth. A gifted clinician and a particularly talented neuroscience writer, Dr. Fishbane presents complex material in an understandable and engaging manner. By anchoring her work in clinical cases, she never loses sight of the people behind the science.

mccullough hyde physical therapy: Conceptual and Methodological Issues on the Adjustment to Aging Sofia von Humboldt, 2016-05-25 This book approaches the concept of adjustment to aging and endeavors to build reader understanding of this construct through a critical review and discussion. Once the reader understands the origins and nature of adjustment to aging, a second innovation encompasses the development of a proposed empirical model of adjustment to aging and the analysis of its components and correlates. Measures to assess adjustment to aging, policies, programs and interventions comprising adjustment to aging and its components and correlates will also be addressed. Another innovation includes the multidimensional experience of adjustment to aging from the cultural perspective. Lastly, it addresses areas of future development related to this construct. Future policies and interventions in older populations need to integrate and debate the role of adjustment to aging, and ultimately consider a variety of different strategies, each with a different set of costs and benefits. Health and social professionals will be at the vanguard of policy making and community and institutional interventions. Hence, resources and tools to adequately prepare these individuals for the future years will be vital. It is the author's hope that this resource can be valuable for professionals and students working within the field of aging, as they develop research and intervention policies encompassing adjustment to aging in the coming years.
