mccombs associates physical therapy: Assessing and Improving Your Teaching Phyllis Blumberg, 2013-09-11 In order to make appropriate changes to improve your teaching and your students' learning, first you need to know how you're teaching now. Figure it out for yourself and invigorate your teaching on your own terms! This practical evidence-based guide promotes excellence in teaching and improved student learning through self-reflection and self-assessment of one's teaching. Phyllis Blumberg starts by reviewing the current approaches to instructor evaluation and describes their inadequacies. She then presents a new model of assessing teaching that builds upon a broader base of evidence and sources of support. This new model leads to self-assessment rubrics, which are available for download, and the book will guide you in how to use them. The book includes case studies of completed critical reflection rubrics from a variety of disciplines, including the performing and visual arts and the hard sciences, to show how they can be used in different ways and how to explore the richness of the data you'll uncover.

mccombs associates physical therapy: Parental Belief Systems Irving E. Sigel, Ann V. McGillicuddy-DeLisi, Jacqueline J Goodnow, 2014-02-25 Research on the topic of parent beliefs, or parent cognition, has increased tremendously since the original publication of this volume in 1985. For this revised second edition, the editors sought to reflect some of the new directions that research on parent cognition has taken. By offering a greater variety of topics, it gives evidence of the intellectual concerns that now engage researchers in the field and testifies to the expanding scope of their interests. Although a unique collection because it reflects the diversity that exists among major researchers in the field, it evinces a common theme -- that the ideas parents have regarding their children and themselves as parents have an impact on their actions. This emphasis on parents' ideas shifts the focus on sources of family influence to ideas or beliefs as determinants of family interactions. The implication of this way of thinking for practitioners is that it suggests the shift to ideas and thoughts from behavior and attitudes.
