Understand Humans Way Better” This revolutionary book goes beyond any recent book on language to dissect how language operates in our minds and how to harness its virtually limitless power. As Dr. Marian explains, while you may well think you speak only one language, in fact your mind accommodates multiple codes of communication. Some people speak Spanish, some Mandarin. Some speak poetry, some are fluent in math. The human brain is built to use multiple languages, and using more languages opens doors to creativity, brain health, and cognitive control. Every new language we speak shapes how we extract and interpret information. It alters what we remember, how we perceive ourselves and the world around us, how we feel, the insights we have, the decisions we make, and the actions we take. Language is an invaluable tool for organizing, processing, and structuring information, and thereby unleashing radical advancement. Learning a new language has broad lifetime consequences, and Dr. Marian reviews research showing that it: · Enhances executive function—our ability to focus on the things that matter and ignore the things that don’t. · Results in higher scores on creative-thinking tasks. · Develops critical reasoning skills. · Delays Alzheimer’s and other types of dementia by four to six years. · Improves decisions made under emotional duress. · Changes what we see, pay attention to, and recall.

This volume brings together contributions by experts involved in a wide range of such areas, based on a large number of diverse languages – spoken and signed. The fact that compound constructions are at the interface of the various components of language – morphology, syntax, phonology, and semantics – makes them ideal testing grounds for models of grammatical architecture, as seen in a number of these chapters. The breadth and depth of the coverage of topics, as well as the unified bibliography, make this volume a basic reference source for those interested in current theoretical as well as experimental approaches to compounding, and thus to theoretical linguists as well as psycholinguists and researchers in related fields of cognitive science.

potato in sign language: *Explanation in Action Theory and Historiography* Gunnar Schumann, 2019-05-29 Is the appropriate form of human action explanation causal or rather teleological? While this is a central question in analytic philosophy of action, it also has implications for questions about the differences between methods of explanation in the sciences on the one hand and in the humanities and the social sciences on the other. Additionally, this question bears on the problem of the appropriate form of explanations of past human actions, and therefore it is prominently discussed by analytic philosophers of historiography. This volume brings together causalists and anti-causalists to address enduring philosophical questions at the heart of this debate, as well as their implications for the practice of historiography. Part I considers the quarrel between causalism and anti-causalism in recent developments in the philosophy of action. Part II presents papers by causalists and anti-causalists that are more narrowly focused on the philosophy of historiography.

The book is organized into five parts. Part I provides an opening framework that addresses three tasks: to place neurolinguistics in current perspective; to provide two case studies of aphasia; and to discuss the rules of the game of the various disciplines that contribute to this volume. Part II on artificial intelligence (AI) and processing models discusses the contribution of AI to neurolinguistics. The chapters in this section introduce three AI systems for language perception: the HWIM and HEARSAY systems that proceed from an acoustic input to a semantic interpretation of the utterance it represents, and Marcus9 system for parsing sentences presented in text. Studying these systems demonstrates the virtues of implemented or implementable models. Part III on linguistic and psycholinguistic perspectives includes studies such as nonaphasic language behavior and the linguistics and psycholinguistics of sign language. Part IV examines neurological perspectives such as the neuropathological basis of Broca's aphasia and the simulation of speech production without a computer. Part V on neuroscience and brain theory includes studies such as the histology, architectonics, and asymmetry of language areas; hierarchy and evolution in neurolinguistics; and perceptual-motor processes and the neural basis of language.

Corbishley MBE 1905-1995 Ian M Stewart, 2009-03-18 Mary Corbishley pioneered an unorthodox method of teaching young deaf children speech, lipreading and English from an early age for higher education, colleges, universities and after-school life in the hearing world. A devout Christian, she ran her school on the basis of her Bible and her faith in her God. In 1939 she courageously set up her School in the face of scepticism, prejudice, bias and officialdom and triumphed in awakening the realisation that it was - and is - not impossible for deaf children to learn to speak, lipread and understand spoken English. Her beloved Mill Hall Oral School with its world-wide reputation ran for nearly 50 years until its politically-enforced closure in 1996. Her life revolved around deaf children whom she loved all her life.

potato in sign language: The Invisible Sex J. M. Adovasio, Olga Soffer, Jake Page, 2016-09-16 Shaped by cartoons and museum dioramas, our vision of Paleolithic times tends to feature fur-clad male hunters fearlessly attacking mammoths while timid women hover fearfully behind a boulder. Recent archaeological research has shown that this vision bears little relation to reality. J. M. Adovasio and Olga Soffer, two of the world's leading experts on perishable artifacts such as basketry, cordage, and weaving, present an exciting new look at prehistory. With science writer Jake Page, they argue that women invented all kinds of critical materials, including the clothing necessary for life in colder climates, the ropes used to make rafts that enabled long-distance travel by water, and nets used for communal hunting. Even more important, women played a central role in the development of language and social life—in short, in our becoming human. In this eye-opening book, a new story about women in prehistory emerges with provocative implications for our assumptions about gender today.
