post test a changing globe: Climate Change and the Role of Education Walter Leal Filho, Sarah L. Hemstock, 2019-11-28 This book offers insights into the educational dimensions of climate change and promotes measures to improve education in this context. It is widely believed that education can play a key role in finding global solutions to many problems related to climate change. Indeed, education as a process not only helps young people to better understand and address the impact of global warming, but also fosters better attitudes and behaviours to aid efforts towards mitigating climate change and adapting to a changing environment. But despite the central importance of education in relation to climate change, there is a paucity of publications on this theme. Against this background, the book focuses on the educational aspects of climate change and showcases examples of research, projects and other initiatives aimed at educating various audiences. It also provides a platform for reflections on the role education can play in fostering awareness on a changing climate. Presenting a wide range of valuable lessons learned, which can be adapted and replicated elsewhere, the book appeals to educators and practitioners alike.

post test a changing globe: The Changing Focus of Regulatory Frameworks Around the Globe and the Opportunities for Harmonization Violeta Stoyanova-Beninska, Armando Magrelli, Daniel O'Connor, 2025-08-25 Regulation related to the development, registration and monitoring of medicinal products has developed at different paces in regions of the world, but the most quoted

trigger for 'modern' drug regulation is the thalidomide tragedy of the mid-20th century. In the past decades a lot of progress has been made in the application and evolution of regulatory legislative procedures for the benefit of patients and public health but also in driving and enabling innovation. Medicines development is a global endeavor and exchange of experience and knowledge between regulatory agencies working under different jurisdictions is not only necessary but seen increasingly as essential. There are several factors playing a role in this process: • Patients are increasingly well informed about their disease, existing treatments, and novel developments on the horizon, and share information with others across regions. • Scientific progress is facing a rapid development with impressive achievements in medicine, pharmacology, basic science, and technical disciplines. With this we also face several novel challenges inherent with the possibilities that technology can provide (e.g. whole genome sequencing, AI, etc.). • Regulatory bodies are facing new challenges with decisions to be made faster for the sake of not delaying the availability and access to newly developed treatments. The COVID-19 crisis has only reiterated the need for collaboration, coherence, and solidarity on a global scale. With this in mind, we as guest editors are opening a research topic which is intended to invite experts from around the globe to contribute their views on the regulation of medicines today and in the future. More specifically we expect manuscripts related to the following topics: • Summary of the key aspects of the 3 main regulatory frameworks globally - USA, Europe and Japan commonalities and differences Future changes to EU legislation - case study of drivers for change • Global trends in regulatory science that impact legislation, drug development and patient access • The importance of regulatory collaboration and harmonization and the role of not for profit organizations • Emerging regulatory frameworks - Africa, Latin America and the ROW • Reliance regulation - pros and cons - is this the direction of travel? • Novel regulatory procedures - case studies of innovation in regulatory practice • Future proofing the regulatory framework and the role of horizon scanning • Scientific advice and other regulatory support tools • Clinical trials, centralized versus decentralized? • Digital revolution - impact of AI and ML • Drug device combinations • Specific regulatory pathways for innovative medicines • Possibilities for regulatory convergence Type of articles expected (but not limited to) are: • Original articles, • Reviews
