systems engineering professional certification: Fire Protection Systems: Engineering and Design Pasquale De Marco, Fire Protection Systems: Engineering and Design is a comprehensive guide to the design and engineering of fire protection systems. This book covers the fundamental principles of fire protection, the various types of fire protection systems, and the design considerations for each type of system. The book also includes chapters on fire protection system inspection and maintenance, fire protection system design calculations, and advanced fire protection system design. This book is written for engineers, architects, fire protection consultants, and other professionals who are involved in the design and maintenance of fire protection systems. It is also a valuable resource for students who are studying fire protection engineering. The book is organized into ten chapters. The first chapter provides an introduction to fire protection system design. The second chapter covers water-based fire protection systems. The third chapter covers foam-based fire protection systems. The fourth chapter covers gaseous fire protection systems. The fifth chapter covers dry chemical fire protection systems. The sixth chapter covers wet chemical fire protection systems. The seventh chapter covers special hazard fire protection systems. The eighth chapter covers fire protection system inspection and maintenance. The ninth chapter covers fire protection system design calculations. The tenth chapter covers advanced fire protection system design. Each chapter includes a number of exercises and problems to help the reader understand the material. The book also includes a glossary of terms and a list of references. Fire Protection Systems: Engineering and Design is an essential resource for anyone involved in the design, installation, or maintenance of fire protection systems. This book provides a comprehensive overview of the field, from the basic principles to the most advanced design techniques. If you like this book, write a review!
