The book also distinguishes itself by assessing whether utilization and integration of next generation data technologies can assist in the identification of new opportunities, which may also be strategically fit for purpose.

t and t technology: An Introduction to Efficiency and Productivity Analysis Timothy J. Coelli, Dodla Sai Prasada Rao, Christopher J. O'Donnell, George Edward Battese, 2005-12-06 The second edition of this book has been written for the same audience as the first edition. It is designed to be a first port of call for people wishing to study efficiency and productivity analysis. The book provides an accessible introduction to the four principal methods involved: econometric estimation of average response models; index numbers; data envelopment analysis (DEA); and stochastic frontier analysis (SFA). For each method, we provide a detailed introduction to the basic concepts, give some simple numerical examples, discuss some of the more important extensions to the basic methods, and provide references for further reading. In addition, we provide a number of detailed empirical applications using real-world data. The book can be used as a textbook or as a reference text. As a textbook, it probably contains too much material to cover in a single semester, so most instructors will want to design a course around a subset of chapters. For example, Chapter 2 is devoted to a review of production economics and could probably be skipped in a course for graduate economics majors. However, it should prove useful to undergraduate students and those doing a major in another field, such as business management or health studies.

t and t technology: Technology and Transition Abdelkader Djeflat, Girma Zawdie, 2014-01-14 The Maghreb countries had a promising start in economic growth after independence. For the most part they thrived on industrialisation by import substitution; but unfortunately this strategy left them with macroeconomic and structural imbalances which together have effectively constrained their ability to compete in the world economic system and to catch up with the rapidly changing global techno-economic circumstances. Issues relating to aspects of technology transfer to the Maghreb, strategies for technological and resource development and the integration of education and R&D systems with the productive systems of the economies in the region are discussed along with relevant cases from Mexico, China, South Korea, India and Bangladesh.
