swot analysis of twitter: Social Media Tools and Platforms in Learning Environments Bebo White, Irwin King, Philip Tsang, 2011-09-20 Online social media have transformed the face of human interaction in the 21st century. Wikis, blogs, online groups and forums, podcasts, virtual worlds, and social tagging are but a few of the applications enabling innovative behaviors that support acquisition, access, manipulation, retrieval, and visualization of information. It is, therefore, no surprise that educational practitioners and theorists have begun to explore how social media can be harnessed to describe and implement new paradigms for communication, learning, and education. The editors' goal in publishing this book was to identify original research on the application of online social media and related technologies in education as well as emerging applications in Web technologies that could provide and shape future educational platforms. The selected contributions deal with questions such as how social media can truly enrich and enhance learning and teaching experiences in ways not otherwise possible; how learning can be integrated in a distributed and ubiquitous social computing environment; or what theories, paradigms, and models are applicable for the support of social computing in education. Researchers in education or educational software will find interesting and sometimes provocative chapters on paradigms and methodologies, virtual and mobile learning spaces, and assessment and social factors. Practitioners in these fields will benefit from an additional section devoted to case studies and first experience reports.

Although processes and tasks can often be automated, saving valuable

man-hours in the process, this automation means that each human employee who is left is just that much more important. For this reason, Human Resources and the functions they provide are critical to a company's success. Without a strong, innovative Human Resources team, with the processes and procedures in place to allow them to work effectively, the best employees cannot be consistently hired or retained. A company can have the best product or service in the world, but if their staff is lacking, sooner or later their company will suffer. In the end, Human Resources has a dramatic effect on a company's bottom line. Cisco Systems, Inc. is one of the companies that truly has an appreciation for this critical business component.

The Financial Times calls the region an economic tiger or even the Engine Room of Europe (Burt 1999, 1). [because, in their view,] economic integration comprising all states bordering the Baltic Sea is not easily to be visualized in the near future (NEBI Yearbook 1998, 5). The decision of a company, whether to invest or to go public in a certain country, should be based (mainly) on the analysis of the region which is not always an easy task. The main objective of this paper is thus to analyse the economic situation in the Eastern Baltic Rim countries by looking at the integration process into the EU, the successes in attracting foreign investors, and the success of the transforming process in general by the means of a SWOT analysis. Theoretical information will give the ability to understand Chapters three through seven on strengths, weaknesses, opportunities and threats of the region.
