table in hindi language: The WordNet in Indian Languages Niladri Sekhar Dash, Pushpak Bhattacharyya, Jyoti D. Pawar, 2016-10-20 This contributed volume discusses in detail the process of construction of a WordNet of 18 Indian languages, called “Indradhanush” (rainbow) in Hindi. It

delves into the major challenges involved in developing a WordNet in a multilingual country like India, where the information spread across the languages needs utmost care in processing, synchronization and representation. The project has emerged from the need of millions of people to have access to relevant content in their native languages, and it provides a common interface for information sharing and reuse across the Indian languages. The chapters discuss important methods and strategies of language computation, language data processing, lexical selection and management, and language-specific synset collection and representation, which are of utmost value for the development of a WordNet in any language. The volume overall gives a clear picture of how WordNet is developed in Indian languages and how this can be utilized in similar projects for other languages. It includes illustrations, tables, flowcharts, and diagrams for easy comprehension. This volume is of interest to researchers working in the areas of language processing, machine translation, word sense disambiguation, culture studies, language corpus generation, language teaching, dictionary compilation, lexicographic queries, cross-lingual knowledge sharing, e-governance, and many other areas of linguistics and language technology.

table in hindi language: *Simultaneous Identities* Uma Pradhan, 2020-12-03 The recent socio-political changes in Nepal have brought assimilationist notions of Nepali nationalism under a tight scrutiny and drawn attention to more plural, inclusive, and diverse notions of Nepaliness. However, both assimilationist and pluralist visions continue to remain normative in their approach, and often posit ethnic and national identity in opposition to each other. Drawing on the everyday practices in the two schools, this book illustrates that social actors in minority language education did not necessarily select between minority identity and national identity, but instead made simultaneous claims to more than one social identity by discursively positioning 'ethnic identity' as 'national identity'. It builds on the notion of 'simultaneity' to illustrate that it is through the 'unresolved co-presences' of apparently contradictory ways that people maintain their multi-layered identities. By arguing for an analytical necessity to adopt relational approach, it aims to complicate the neat compartmentalisation of identities.

table in hindi language: *Dialect Accent Features for Establishing Speaker Identity* Manisha Kulshreshtha, Ramkumar Mathur, 2012-03-24 Dialect Accent Features for Establishing Speaker Identity: A Case Study discusses the subject of forensic voice identification and speaker profiling. Specifically focusing on speaker profiling and using dialects of the Hindi language, widely used in India, the authors have contributed to the body of research on speaker identification by using accent feature as the discriminating factor. This case study contributes to the understanding of the speaker identification process in a situation where unknown speech samples are in different language/dialect than the recording of a suspect. The authors' data establishes that vowel quality, quantity, intonation and tone of a speaker as compared to Khariboli (standard Hindi) could be the potential features for identification of dialect accent.
