tarma software research ltd: *The Nobel Factor* Avner Offer, Gabriel Söderberg, 2019-11-19 Economic theory may be speculative, but its impact is powerful and real. Since the 1970s, it has been closely associated with a sweeping change around the world--the market turn. This is what Avner Offer and Gabriel Soderberg call the rise of market liberalism, a movement that, seeking to replace social democracy, holds up buying and selling as the norm for human relations and society. Our confidence in markets comes from economics, and our confidence in economics is underpinned by the Nobel Prize in Economics, which was first awarded in 1969. Was it a coincidence that the market turn and the prize began at the same time? *The Nobel Factor*, the first book to describe the origins and power of the most important prize in economics, explores this and related questions by examining the history of the prize, the history of economics since the prize began, and the simultaneous struggle between market liberals and social democrats in Sweden, Europe, and the United States. *The Nobel Factor* tells how the prize, created by the Swedish central bank, emerged from a conflict between central bank orthodoxy and social democracy. The aim was to use the halo of the Nobel brand to enhance central bank authority and the prestige of market-friendly economics, in order to influence the future of Sweden and the rest of the developed world. And this strategy has worked, with sometimes disastrous results for societies striving to cope with the requirements of economic theory and deregulated markets

tarma software research ltd: Corruption, Economic Growth and Globalization Aurora A.C. Teixeira, Carlos Pimenta, António Maia, José António Moreira, 2015-08-14 Corruption is increasingly placed on top of the agenda of national governments and supra national institutions, such as the OECD, UN or the World Bank. A necessary condition for promoting sustainable economic growth is the pre-existence of a stable political system which is able to control corruption. Corruption, however, is a very complex issue, associated with institutional and cultural specificities, personality traits related to individualistic values, and criminal personalities. In this book the social, political and economic realities that prevail in particular settings are viewed from an interdisciplinary, multidimensional, and a multi country perspective. This book is divided into three parts. The first part presents a comprehensive, theoretical and empirical framework of corruption with an overview of literature on economic growth and corruption. Part two, encompasses the in-depth analysis of several countries, ranging from middle corrupted contexts like Portugal, to highly corrupted countries including Serbia, Russia, Thailand and China- the latter viewed from the perspective of firms from a very low corruption country such as Finland. The final part explores the prevention and control of corruption, looking at the public sector in Thailand and fighting corruption with different strategies. This volume is of the interest of those who study international economics, development economics or organised crime.

The book does not presume an in-depth prior knowledge or experience of systematic searching and includes case studies, practical examples and ideas for further research and reading. The book is divided into three parts: *Methods* covers theoretical approaches to evidence synthesis and the implications that these have for the search process, including searching for complex topics and choosing the right sources. *Technology* examines new technologies for retrieving evidence and how these are leading to new directions in information retrieval and evidence synthesis. *People* considers the future of the information specialist as an expert searcher and explores how information professionals can develop their skills in searching, communication and collaboration to ensure that information retrieval practice is, and remains, evidence-based. *Systematic Searching* will be essential reading for library and information service providers and information specialists, particularly those in a health-related environment.
