This book adds to the criminological literature on the topic of reentry for women, focusing on the barriers women face as they return to society and adjust to life after incarceration. Each chapter addresses specific issues, challenges, and obstacles affiliated with the hindrance of successful reentry processes associated with female offenders, as well as data-driven empirical studies. While corrections has often misunderstood or overlooked the needs of returning offenders, the shortcomings of the institutions have a greater impact on women than on their male counterparts, particularly regarding the occurrence of social and medical problems, especially those related to mental health and substance abuse. *Female Offenders and Reentry* helps criminal justice students and practitioners

see the full picture when considering the challenges faced by female offenders reintegrating into society.

tcu institute of behavioral research: Rehab on the Range Holly M. Karibo, 2024-11-19 2025 Coral Horton Tullis Memorial Prize, Texas State Historical Association The first study of the Fort Worth Narcotic Farm, an institution that played a critical role in fusing the War on Drugs, mass incarceration, and public health in the American West. In 1929, the United States government approved two ground-breaking and controversial drug addiction treatment programs. At a time when fears about a supposed rise in drug use reached a fevered pitch, the emergence of the nation's first "narcotic farms" in Fort Worth, Texas, and Lexington, Kentucky, marked a watershed moment in the treatment of addiction. Rehab on the Range is the first in-depth history of the Fort Worth Narcotic Farm and its impacts on the American West. Throughout its operation from the 1930s to the 1970s, the institution was the only federally funded drug treatment center west of the Mississippi River. Designed to blend psychiatric treatment, physical rehabilitation, and vocational training, the Narcotic Farm, its proponents argued, would transform American treatment policies for the better. The reality was decidedly more complicated. Holly M. Karibo tells the story of how this

institution—once framed as revolutionary for addiction care—ultimately contributed to the turn towards incarceration as the solution to the nation's drug problem. Blending an intellectual history of addiction and imprisonment with a social history of addicts' experiences, *Rehab on the Range* provides a nuanced picture of the Narcotic Farm and its cultural impacts. In doing so, it offers crucial historical context that can help us better understand our current debates over addiction, drug policy, and the rise of mass incarceration.

tcu institute of behavioral research: What Works (and Doesn't) in Reducing Recidivism

Edward J. Latessa, Shelley J. Listwan, Deborah Koetzle, 2014-09-19 This book offers criminologists and students an evidence-based discussion of the latest trends in corrections. Over the last several decades, research has clearly shown that rehabilitation efforts can be effective at reducing recidivism among criminal offenders. However, researchers also recognize that treatment is not a one size fits all approach. Offenders vary by gender, age, crime type, and/or addictions, to name but a few, and these individual needs must be addressed by providers. Finally, issues such as leadership, quality of staff, and evaluation efforts affect the quality and delivery of treatment services. This book synthesizes the vast research for the student interested in correctional rehabilitation as well as for the practitioner working with offenders. While other texts have addressed issues regarding treatment in corrections, this text is unique in that it not only discusses the research on what works but also addresses implementation issues as practitioners move from theory to practice, as well as the importance of staff, leadership and evaluation efforts.

Edward Zigler, Jim Hinson, Jennifer Walker, 2014 *Inspiring Greatness in Education* examines the Independence School District's adoption of Edward Zigler's School of the 21st Century education model. tcu institute of behavioral research: Creating Infrastructures for Latino Mental Health

Lydia P. Buki, Lissette M Piedra, 2011-09-08 Latinos are the fastest growing and largest minority group in the United States. In 2008, this group numbered over 47 million; by 2050, the population is expected to triple, reaching 133 million. Traditionally, Latinos have immigrated to large urban centers (e.g., New York, Los Angeles) that over long periods of time developed a complex infrastructure to receive new immigrants. Increasingly, new Spanish-speaking immigrants are moving into areas of the country previously unfamiliar to them. Although urban co-ethnic communities continue to be the destination of many newcomers, immigrants from Mexico, Central America, and South America in pursuit of low-skilled labor opportunities are settling in small towns and rural areas of the South and Midwest. This new demographic trend has resulted in the creation of the term new growth communities, which refers to small rural areas that are now home to a small but rapidly growing Hispanic population. Unfortunately, these communities, which are now present in many states across the country (e.g., Illinois, North Carolina), lack the infrastructure necessary to meet the needs of Latino immigrants (e.g., access to health care, immigration assistance, and breaking down language barriers). The lack of an infrastructure and the lack of an established ethnic community to facilitate the assimilation of new immigrants present an ongoing challenge, especially in the area of Latino mental health. The volume focuses on dealing with systemic issues and on providing innovative ideas for development of infrastructure of services. This text will advance ways to understand and ameliorate mental health disparities both from research and experiential perspectives.

tcu institute of behavioral research: Criminal Justice and Public Health

Hayden Smith, 2017-10-02 The criminal justice system now serves as the chief provider of health care services to a significant portion of society. This includes the provision of physical and mental health care for offender populations who require substantial health care resources. To date, little is known or understood with regard to how these services and programs are being delivered. This book addresses the gaps in our knowledge by presenting a range of studies detailing the daily practices

that occur in places where criminal justice and public health systems intersect. This includes an assessment of sheriff agency emergency communication systems, a study of problem behaviours and health using a juvenile sample, the challenge of treating mentally ill prison inmates with note of important gender differences, the impact of case management on justice systems, and a review of substance abuse cessation programs among pregnant women currently serving probation and parole sentences. Also included is a policy piece in which the authors call for an integrated model that is neither criminological nor public health specific. These readings provide a range of empirical examples that highlight important successes and challenges facing the criminal justice and public health systems. They suggest that integration and partnerships represent the most efficacious means to reduce critical social problems such as violence, poor health, and criminality. This book was originally published as a special issue of Criminal Justice Studies.

The volume is a comprehensive and fresh approach to examining sentencing and community and institutional corrections. The book includes empirical and theoretical essays and recent developments on the pressing concerns of persons of traditionally non-privileged statuses, including racial and ethnic minorities, indigenous populations, gender, immigrant status, LGBTQ+, transgender, disability, aging, veterans, and other marginalized statuses. The handbook considers a wide range of perspectives for understanding the experiences of persons who identify as a member of a traditionally marginalized group. This volume aims to help scholars and graduate students by providing an up-to-date guide to contemporary issues facing corrections and sentencing. It will also assist practitioners with resources for developing socially informed policies and practices. This collection of essays contributes to the knowledge base by summarizing what is known in each area and identifying emerging areas for theoretical, empirical, and policy work. This is Volume 7 of The ASC Division on Corrections and Sentencing Handbook Series. The handbooks provide in-depth coverage of seminal and topical issues around sentencing and corrections for scholars, students, practitioners, and policymakers.

tcu institute of behavioral research: *Handbook of Correctional Mental Health* Charles L. Scott, 2009-10-06 Clinicians who work on the frontlines of correctional mental health know that the challenges are only increasing. Not only is the proportion of inmates with mental disorders growing at a rate that exceeds that of the correctional population as a whole, but this group is expanding at both ends of the aging continuum, so that increasing numbers of both geriatric and juvenile offenders require assessment and treatment. Changing patient demographics and evolving treatment modalities make it essential that psychiatrists, psychologists, social workers, nurses, and other professionals who serve the prison population have access to the most practical, up-to-date, and comprehensive resource. Handbook of Correctional Mental Health, now in an expanded, second edition, is that resource. This book addresses key concepts to ensure that the reader meets the current standard of care for inmates through all phases of the criminal justice system. In 20 state-of-the-art chapters, nationally recognized providers and correctional mental health experts address the most pressing issues facing clinicians. Unique to this edition, the Handbook: Summarizes the literature regarding unique populations observed in a correctional environment, thereby assisting the provider in tailoring treatment to various target populations. Provides a clear overview of both malpractice law and the concept of deliberate indifference that aids the reader in understanding the legal requirements for providing care and minimizing risks of lawsuits. Educates clinicians on how to differentiate feigned versus legitimate mental health symptoms, and how to understand and interpret inmate motivations for psychiatric malingering. Discusses important administrative aspects regarding documentation issues, quality assurance, and practicing under a consent decree. Provides useful tables throughout the text with key summary points emphasized.

Includes five new, clinically focused chapters on the assessment and treatment of inmates with substance use disorders, geriatric offenders, juvenile offenders, inmates with self-injurious behaviors, offenders who have experienced various traumas during their lives, and inmates housed on maximum security units and death row. Other titles in the field are either out-of-date or limited in scope. By contrast, this new edition of Handbook of Correctional Mental Health includes everything mental health professionals need to provide the highest standard of care to this growing -- and complex -- patient population.
