taste of the wild diet dog food: *The Wild Diet* Abel James, 2015-04-07 The creator of The Fat-Burning Man Show shares his revolutionary Paleo-inspired weight-loss program Every month, half a million visitors download The Fat-Burning Man Show, eager to learn the secret of Abel James's incredible weight-loss success. Growing up on a defunct farm in the backwoods of New Hampshire, Abel had easy access to a host of natural foods that a backyard garden could provide: eggs, fresh produce, and real butter. But as he got older, he started eating a modern diet of processed foods, and by his early twenties, Abel found himself with high blood pressure, insomnia, acne, digestive problems, and love handles. Following the typical dieting advice of "eat less, exercise more," and despite running thirty miles a week and nibbling tasteless, low-fat, low-calorie food, his health only worsened as his waistline expanded. In an effort to gain control of his health, Abel dug deep into nutrition research and discovered that everything he'd been told about low-calorie eating was wrong. He realized that our bodies are wired to eat luxuriously—and burn fat—as long as we're eating real, natural foods that are grown on a farm and not in a factory. Incredibly, after just a few days of eating a Paleo-inspired diet of the most delicious wild foods that were rich in fat and fiber, Abel's health problems began to disappear. And after forty days—and radically cutting back his exercise routine—he had lost twenty pounds. The Wild Diet is the book Abel's hundreds of thousands of fans have been clamoring for. At a time when our collective health is failing, Abel sounds a clarion call to announce that good health doesn't live in a pill, exercise program, or soul-crushing diet. The secret is simply getting back to our wild roots and eating the way we have for centuries.

taste of the wild diet dog food: *Economies of Death* Patricia J. Lopez, Kathryn A. Gillespie, 2015-04-24 *Economies of Death: Economic Logics of Killable Life and Grievable Death* examines the economic logic involved in determining whose lives and deaths come to matter and why. Drawing from eight distinct case studies focused on the killability and grievability of certain humans, animals, and environmental systems, this book advances an intersectional theory of economies of death. A key feature of late-modern capitalism is its tendency to economically order certain human and nonhuman lives and environments, while appropriating and commodifying certain bodies and spaces in the process. Spanning the social sciences and humanities in its contributions and scope, each chapter shows how living beings and places are stripped down to the calculus of their end, with profound ethical and political implications for these entities and the world around them. From the genocide in Cambodia to the way some animals are considered 'pets' and others 'food'; from September 11, 2001 and Afghanistan to the politics of redemption for prisoners and ex-racehorses in Kentucky, these case studies draw from and develop an enriched understanding of bio- and necropolitics, posthumanism, killability and grievability. In drawing together the objectification of humans, animals and environments (and the power-laden hierarchies that maintain this objectification), this volume highlights how death across these subjects informs and responds to broader geo-economic processes. This book aims to examine the reach of economies of death across such diverse subjects, challenging readers to consider the every-day calculus they make in

determining whose lives mean more and why.

taste of the wild diet dog food: Dog of the Decade Deborah Thompson, 2021-11-19 What do dogs mean in America? How do Americans make meaning through their dogs? The United States has long expressed its cultural unconscious through canine iconography. Through our dogs, we figure out what we're thinking and who we are, representing by proxy the things that we don't quite want to recognize in ourselves. Often, it's a specific breed or type of dog that serves as an informal cultural mascot, embodying an era's needs, fears, desires, longings, aspirations, repressions, and hopeless contradictions. Combining cultural studies with personal narrative, this book creates a playful, speculative reading of American culture through its canine self-representations. Looking at seven different breeds or types over the last seven decades, readers will go on an intellectual dog walk through some of the mazes of American cultural mythology.

taste of the wild diet dog food: Dog Food Logic Linda P. Case, M.S., 2014-02-12
Choosing the right dog food in a world with too many choices
 Walking down the dog food aisle in a pet supply superstore can present you with an overwhelming number of choices. Reading about dog food on the internet can make your head spin with so many opinions and stories. And judging the content that you find on dog food packaging can be confusing and misleading. How can the average dog owner make an informed choice in accordance with her dog's age, size and condition? In her latest book, author Linda Case describes how to make logical, evidence-based decisions for what to feed your dog amid all the options available.

 You will learn
 • How pet food marketers appeal to your emotions to persuade you to buy a particular type of dog food.
 • To distinguish between scientific, evidence-based information and the anecdotal evidence which is so pervasive—and often misleading—in the dog food arena.
 • Is there a scientific basis for dog foods designed specifically for puppies, senior dogs, canine athletes—even various breeds of dogs?
 • How to read and evaluate all of the material included on a typical package of dog food from the ingredients and label claims ("Natural,"

“Anti-Oxidant,” “Low Fat”), to the Nutrient Analysis and Nutritional Adequacy statements.
 • How to avoid choice paralysis and the cognitive traps that can interfere with clear decision making.

 What experts are saying about <I>Dog Food Logic</I>
 Pet food is like a religion for many—but now those strong emotional ties can be backed up with fact. Linda Case separates fact from fiction, explains the complex terms and offers a guide to pet nutrition in simple to comprehend language. Unlike other books on this topic, there is no agenda here—except to present facts and then allow pet owners to make their own logical conclusions, letting the kibble drop where it may.

taste of the wild diet dog food: Big Kibble Shawn Buckley, Oscar Chavez, 2020-12-01 A big, inside look at the shocking lack of regulation within the pet food industry, and how readers can dramatically improve the quality of their dogs’ lives through diet. What's really going into commercial dog food? The answer is horrifying. Big Kibble is big business: \$75 billion globally. A handful of multi-national corporations dominate the industry and together own as many as 80% of all brands. This comes as a surprise to most people, but what’s even more shocking is how lax the regulations and guidelines are around these products. The guidelines—or lack thereof—for pet food allow producers to include ever-cheaper ingredients, and create ever-larger earnings. For example, “legal” ingredients in kibble include poultry feces, saw dust, expired food, and diseased meat, among other horrors. Many vets still don’t know that kibble is not the best food for dogs because Big Kibble funds the nutrition research. So far, these corporations have been able to cut corners and still market and promote feed-grade food as if it were healthful and beneficial—until now. Just as you are what you eat, so is your dog. Once you stop feeding your dog the junk that’s in kibble or cans, you have taken the first steps to improving your dog’s health, behavior and happiness. You know the unsavory side of Big Tobacco and Big Pharma. Now Shawn Buckley, Dr. Oscar Chavez, and Wendy Paris explain all you need to know about unsavory Big Kibble—and offer a brighter path forward for you and your pet.
