instructing, guiding, leading, and modeling/exemplifying a way of life that would help to facilitate and bring adults to their full degree of humanness. The book presents more than 500 documents that are examined through two different lenses. The first lens is the history and philosophy (or a chronological approach) of andragogy while the second lens takes a look at the major themes as categories of what the documents express. While encompassing the background, uses, and future of andragogy, this book is ideally intended for teachers, administrators, practitioners, stakeholders, researchers, academicians, and students.

why is learning history important: Why Learn History (When It's Already on Your Phone) Sam Wineburg, 2018-09-17 A look at how to teach history in the age of easily accessible—but not always reliable—information. Let's start with two truths about our era that are so inescapable as to have become clichés: We are surrounded by more readily available information than ever before. And a huge percent of it is inaccurate. Some of the bad info is well-meaning but ignorant. Some of it is deliberately deceptive. All of it is pernicious. With the Internet at our fingertips, what's a teacher of history to do? In *Why Learn History (When It's Already on Your Phone)*, professor Sam Wineburg has the answers, beginning with this: We can't stick to the same old read-the-chapter-answer-the-question snoozefest. If we want to educate citizens who can separate fact from fake, we have to equip them with new tools. Historical thinking, Wineburg shows, has nothing to do with the ability to memorize facts. Instead, it's an orientation to the world that cultivates reasoned skepticism and counters our tendency to confirm our biases. Wineburg lays out a mine-filled landscape, but one that with care, attention, and awareness, we can learn to navigate. The future of the past may rest on our screens. But its fate rests in our hands. Praise for *Why Learn History (When It's Already on Your Phone)* "If every K-12 teacher of history and social studies read just three chapters of this book—"Crazy for History," "Changing History . . . One Classroom at a Time," and "Why Google Can't Save Us"—the ensuing transformation of our populace would save our democracy." —James W. Lowen, author of *Lies My Teacher Told Me* and *Teaching What Really Happened* "A sobering and urgent report from the leading expert on how American history is taught in the nation's schools. . . . A bracing, edifying, and vital book." —Jill Lepore, *New Yorker* staff writer and author of *These Truths* "Wineburg is a true innovator who has thought more deeply about the relevance of history to the Internet—and vice versa—than any other scholar I know. Anyone interested in the uses and abuses of history today has a duty to read this book." —Niall Ferguson, senior fellow, Hoover Institution, and author of *The Ascent of Money* and *Civilization*

why is learning history important: Hearing their Voices Kay Traille, 2019-12-25 This book is about what teachers need to know before they teach history to students of color. It is a book about the 'inside feel' of these students and what they think and say history is for, based on research in the United States with reflections on the United Kingdom. It gives history teachers a better understanding of why culturally relevant pedagogy, inclusion and issues surrounding diversity are of crucial importance if we are to reach these students. We live in a world where many multicultural students think they have little connection with the histories, traditions and values in which they have grown up, some look toward groups who promise them a sense of belonging and ownership of created histories which clash with and threaten democratic societies. This book begins with the belief that it is important to understand how a subject, history, makes non-White students think and feel about themselves. At its center are assertions made by students of color who think learning history that is rich in aspects they can connect with culturally and personally, is important and necessary in gaining and holding their attention. Then I make suggestions of how we best communicate and set high expectations for these students, how as history teachers we use strategies to better engage these students, and redirect the unengaged. We need to make sure history educators provide necessary and appropriate scaffolding for students of colour to better process what they learn in history lessons, making sure they are engaged in higher-order thinking in an equitable safe environment where they see and know that their diversities are respected and valued.

why is learning history important: Exploring Indiana Through Project-Based Learning Carole Marsh, 2016-06-01 Exploring Indiana through Project-Based Learning includes 50 well-thought-out projects designed for grades 3-5. In assigning your students projects that dig into Indiana's geography, history, government, economy, current events, and famous people, you will deepen their appreciation and understanding of Indiana while simultaneously improving their analytical skills and ability to recognize patterns and big-picture themes. Project-based learning today is much different than the craft-heavy classroom activities popular in the past. Inquiry, planning, research, collaboration, and analysis are key components of project-based learning activities today. However, that doesn't mean creativity, individual expression, and fun are out. They definitely aren't! Each project is designed to help students gain important knowledge and skills that are derived from standards and key concepts at the heart of academic subject areas. Students are asked to analyze and solve problems, to gather and interpret data, to develop and evaluate solutions, to support their answers with evidence, to think critically in a sustained way, and to use their newfound knowledge to formulate new questions worthy of exploring. While some projects are more complex and take longer than others, they all are set up in the same structure. Each begins with the central project-driving questions, proceeds through research and supportive questions, has the student choose a presentation option, and ends with a broader-view inquiry. Rubrics for reflection and assessments are included, too. This consistent framework will make it easier for you assign projects and for your students to follow along and consistently meet expectations. Encourage your students to take charge of their projects as much as possible. As a teacher, you can act as a facilitator and

guide. The projects are structured such that students can often work through the process on their own or through cooperation with their classmates.
