why study a foreign language: Understanding Second Language Acquisition Lourdes Ortega, 2014-02-04 Whether we grow up with one, two, or several languages during our early years of life, many of us will learn a second, foreign, or heritage language in later years. The field of Second language acquisition (SLA, for short) investigates the human capacity to learn additional languages in late childhood, adolescence, or adulthood, after the first language --in the case of monolinguals-- or languages --in the case of bilinguals-- have already been acquired. Understanding Second Language Acquisition offers a wide-encompassing survey of this burgeoning field, its accumulated findings and proposed theories, its developed research paradigms, and its pending questions for the future. The book zooms in and out of universal, individual, and social forces, in each case evaluating the research findings that have been generated across diverse naturalistic and formal contexts for second language acquisition. It assumes no background in SLA and provides helpful chapter-by-chapter summaries and suggestions for further reading. Ideal as a textbook for students of applied linguistics, foreign language education, TESOL, and education, it is also recommended for students of linguistics, developmental psycholinguistics, psychology, and cognitive science. why study a foreign language: *World Language Education as Critical Pedagogy* Timothy G. Reagan, Terry A. Osborn, 2020-09-02 Accessible and cutting-edge, this text is a pivotal update to the field and offers a much-needed critical perspective on world language education. Building off their classic 2002 book, *The Foreign Language Educator in Society*, Timothy G. Reagan and Terry A. Osborn address major issues facing the world language educator today, including language myths, advocacy, the perceived and real benefits of language learning, linguistic human rights, constructivism, learning theories, language standards, monolingualism, bilingualism and multiculturalism. Organized into three parts – Knowing Language, Learning Language, and Teaching Language – this book applies a critical take on conventional wisdom on language education, evaluates social and political realities, assumptions, and controversies in the field. Each chapter includes questions for reflection and discussion to support students and educators in developing their own perspectives on teaching and learning languages. With a critical pedagogy and social justice lens, this book is ideal for scholars and students in foreign/world language education, social justice education, and language teaching methodology courses, as well as pre- and in-service teachers.

why study a foreign language: *Individual Differences in Second/Foreign Language Speech Production: Multidisciplinary Approaches and New Sounds* Peijian Paul Sun, Boping Yuan, Xun Yan, Jimin Kahng, 2023-09-01 Second/foreign language (L2) speech production is a complex process requiring individuals' combined efforts to utilize various processing components such as conceptualiser, formulator, and articulator. Since the publication of Pim Levelt's book *Speaking – From Intention to Articulation* in 1989, a considerable number of studies have examined L2 speech production in the field of neuroscience with a particular focus on the link between speech perception and speech production. Undeniably, a neurolinguistic examination of speech production can enrich our understanding of how human brains compute linguistic information at a cognitive level. However, it is insufficient by only focusing on the neurocognitive dimension of speech production, given that individuals' speech production can be subject to various individual differences factors, either cognitively, affectively, or socio-culturally. It is, therefore, necessary to move beyond the neurocognitive understanding of speech production by taking every possible perspective into consideration. Individual difference, as an umbrella term, covers psychological traits, personal characteristics, cognitive and emotional components that distinguish learners from each other. Given that individual difference factors can reveal disparities in L2 learning and performance among learners, such factors have attracted researchers' growing interest concerning their influences on L2 speech processing, their relationships with L2 speech performance, and their contributions to L2 speech development. Nevertheless, our understanding of L2 speech production is not only insufficient compared to other L2 skills such as writing and reading, but also limited to the neurocognitive account of L2 speech production. More research, therefore, is in urgent need to uncover the influence of various individual differences factors on L2 speech production from multidisciplinary perspectives.

why study a foreign language: Teaching and Learning Chinese as a Second or Foreign Language Ko-Yin Sung, 2019-10-23 *Teaching and Learning Chinese as a Second or Foreign Language*, edited by Ko-Yin Sung, addresses three emerging themes in the field of Chinese language teaching and learning. (1) Increasingly ubiquitous in all language learning and teaching, and for the learning of Chinese as a second language in particular, information and communication technology (ICT) can serve as an important and effective tool. Several chapters focus on how certain emerging ICT tools are applied in teaching and learning Chinese as a second language. (2) Due to China's economic and political influence, the number of students of all ages studying Chinese as a second language—but especially young learners—has increased in many parts of the world. Despite this, the research into teaching Chinese to young learners has lagged behind. Several chapters investigate young learners' motivations and effective methods for assisting them to master the Chinese

language. (3) The writing system of the Chinese language poses many challenges for learners, especially those more familiar with alphabetical languages. In light of this difficulty in learning Chinese characters, some of the chapters identify effective teaching and learning strategies to master the Chinese language.
