Furthermore, this text provides context to civilian organizations, administrative personnel, recruiting departments and family members that interact with or assist in making important decisions for military surgeons. This manual features insight and guidance from senior leaders of our Armed Forces, both past and present, who have excelled in academic, operational and clinical surgical careers. wilderness medicine society conference: Travel Medicine: Tales Behind the Science Annelies Wilder-Smith, Marc Shaw, Eli Schwartz, 2007-06-07 Travel to exotic places is fascinating, and equally so are infections and other dangers of exotic travel. Moreover, one need not be traveling to suffer these maladies; sometimes they travel to you. The enormous global mobility demands a public health response. The result is the concept of 'travel medicine' as a separate discipline. This book describes the evolution of travel medicine, travel vaccines, malaria prophylaxis and infections of adventure and leisure. This book is unique and different to the standard textbooks on travel medicine. It provides rare insights into many of the behind-the-scenes in travel medicine, personal stories of failures and successes of travel medicine practitioners, the 'real life' tales that unravel the science behind travel medicine. We believe that the best lessons are learned from personal stories. Not every travel is fun. Some travel is for a cause, be it religious or humanitarian, or be it to escape certain political systems. We have added stories on the tragedies of so-called 'undocumented refugees', and stories written by colleagues who were involved in humanitarian care. Pilgrimages attract large number of 'travelers' and yet we know so little about these pilgrimages. Chapters on the Muslim, Hindu, Buddhist, and Christian pilgrimages aim to correct this. Diseases also travel. The spread of global diseases and pandemics is fascinating. This book provides an overview of the pandemics, in particular that of cholera, yellow fever, severe acute respiratory syndrome and influenza. Globalization, migration and health lead to a history of disease and disparity in the global village - our world. And what about the revised International Health Regulations- what do we need to know about them in the context of travel medicine? In the next millennium, our world will have inherited further global movement. It may even include travel to aerospace. The 'Epilogue' awakes some of our old dreams - the last frontier, space travel... Annelies Wilder-Smith has lived in China, Papua New Guinea, Nepal, New Zealand, and Switzerland. She is currently based in Singapore from where she continues to travel extensively throughout Asia. She is the Head of the Travellers Health ' Vaccination Centre in Singapore, one of the largest travel clinics in Asia. She was in a unique position to do research on W135 meningococcal disease in Hajj pilgrims during the outbreak. She 'lived through' the SARS epidemic in Singapore. Eli Schwartz is the Director of the Center for Geographic Medicine and Tropical Diseases at Sheba Medical Center, Tel-Aviv University, Israel. Eli is a 'real' tropical medicine specialist. He obtained all his experience in the field, including Nepal, Tibet, and numerous adventure travels to Africa where he prefers to do his studies on the sides of the Omo River. Marc Shaw is a passionate traveler, doctor, actor and observer of fine humor. His favorite pastime is to be an expedition doctor. This has taken him to exotic places such as Namibia, Mongolia, Pitcairn Islands, and to the Amazon. He is the Director of WORLDWIDE Travellers' Health Centres in New Zealand.

wilderness medicine society conference: Hospital Privileges Mark Hopkins, 2011-04-25 In a Colorado ski resort town, two doctors die under mysterious circumstances, while their deaths are reported as little more than a tragic accident. However, a local police detective named Scotty Corrigan, is suspicious of the deaths. During his investigation, he contacts Mark Adams, a doctor in a resort town in Utah for help in the case. Unbeknownst to the police officer, Adams begins to do an informal investigation of the deaths on his own and discovers something more frightening than anything he has ever encountered. Suddenly, he is propelled into a world where there is no distinction between right and wrong, good and bad, and where power and wealth determine everything -- the world of corporate health care, where the bottom line is the dollar. He frantically turns to the only person he knows. When his information lands in the wrong hands in Washington D.C., a race begins between the pursuit of truth and justice -- and his very own life.
