wind in german language: *When the Wind Was Green* Lee Freese, 2021-11-18 When the Wind was Green By: Lee Freese When the Wind was Green is a memoir that describes a personal quest over the course of a lifetime to understand how the world works. The author tells how, as a child, the world never made much sense to him. Much of what he was told and taught didn't ring true, and often the author couldn't figure what was happening or why. He couldn't make much sense of people in situations, some of which were ordinary, but some very significant. He became fixated by this to the point where it became a theme for his life: figuring out the order of things so as to reckon the truth. As a young man this became a personal quest, and in presenting it to the reader the author adopts a personal and emotional rendering, occasionally interspersed with science and reason. The memoir relates how the author came to terms with two abusive alcoholics he lived with, and his efforts to understand and make sense of religion and of his educational experience. The last third of the memoir describes, sometimes in heart-rending terms, the love he has known and lost.

The content of this book is structured into four parts. Part 1- Description of materials for wind instruments deals with wood species and materials for reeds used for making

clarinet, oboe and bassoon- and, with metallic materials and alloys for - horn, trumpet, trombone, etc. Auxiliary materials associated with the manufacturing of wind instruments are felt, cork, leather and parchment. Part 2- Basic acoustics of wind instruments, in which are presented succinctly, some pertinent aspects related to the physics of the resonant air column. An important aspect discussed is related to the effect of wall material on the vibration modes of the walls of wind instruments. The methods for measuring the acoustical properties of wind instruments are presented. Part 3- Manufacturing of wind instruments, describes the technology used in manufacturing metallic tubes and pipes made of wood. Part 4 - The durability and degradation of materials addresses data about methods for cleaning wind instruments, studies factors producing degradation of organ pipes, describes methods of conservation and restoration of brass instruments and of historical pipe organs. Finally, the properties of marble are described, being the only one nondegradable and sustainable material used for pipes for organs.

wind in german language: George Merrick, Son of the South Wind Arva Moore Parks, 2015-11-03 The story of developers selling off the Sunshine State is as old as the first railroad tracks laid across the peninsula. But seldom do we hear about the men who actually built a better Florida. In *George Merrick, Son of the South Wind*, South Florida historian Arva Moore Parks recounts George Merrick's quest to distinguish himself from the legions of developers who sought only profit. Helping to create the land boom of the 1920s, Merrick transformed his family's citrus grove just outside of Miami into one of the finest planned communities: the master suburb of Coral Gables. With a team of architects and city planners, he built homes for the growing middle class in the Mediterranean Style using local stone, and he invested in public infrastructure by designing and building parks and pools, trolley lines and waterways. He pledged land for a library and the university that would become the University of Miami. Hailed in national publications as a visionary, Merrick was green before green, a New Urbanist before the movement even had a name. As Coral Gables and Merrick prospered, he reinvested in education, affordable housing, and other progressive causes. But the Great Depression ravaged Miami, and Merrick's idealism cost him his fortune. He died with an estate worth less than \$400. With unprecedented access to the Merrick family and mining a treasure trove of Merrick's personal letters, documents, speeches, and manuscripts, Parks presents the remarkable story of George Merrick and the development of one of the nation's most iconic planned cities.

B. Holley, Jr., *Science* "The present biography is eminently readable, sometimes puckish, and von Karman himself is rather inspiring in his faith in science." — Kirkus "Every paragraph grips the reader's attention... a book almost impossible to put down until it is read." — *Aerospace Historian* "This account of von Kármán's life and his contributions to the science of aerodynamics is most fascinating reading." — *The Science Teacher* "Every page of this superb classic is infused with von Karman's humanity. As his narrative makes clear, he was not simply a clever technician but a man of character whose vision advanced the aerospace sciences and fostered international cooperation." — *Aviation History*

dam it, drain it, nuke it, poison it, pave it, and subdivide it, writes Timothy Egan of the West; still, this region's hold on the American character has never seemed stronger. In this colorful and revealing journey through the eleven states west of the 100th meridian, Egan, a third-generation westerner, evokes a lovely and troubled country where land is religion and the holy war between preservers and possessors never ends. Egan leads us on an unconventional, freewheeling tour: from America's oldest continuously inhabited community, the Ancoma Pueblo in New Mexico, to the high kitsch of Lake Havasu City, Arizona, where London Bridge has been painstakingly rebuilt stone by stone; from the fragile beauty of Idaho's Bitterroot Range to the gross excess of Las Vegas, a city built as though in defiance of its arid environment. In a unique blend of travel writing, historical reflection, and passionate polemic, Egan has produced a moving study of the West: how it became what it is, and where it is going. The writing is simply wonderful. From the opening paragraph, Egan seduces the reader. . . . Entertaining, thought provoking. --The Arizona Daily Star Weekly A western breeziness and love of open spaces shines through *Lasso the Wind*. . . . In the past few decades, growth in the wind energy sector has been most phenomenal among all renewable energy resources. In this context, it is nearly universally agreed that wind energy can definitely play an important part in ensuring a sustainable future. The topic is highly interdisciplinary and requires an accessible format for non-experts. Hence, this compact version is suitable for many students and practitioners who intend to read concisely on wind energy.

wind in german language: *Wind in the Wires and an Escaper's Log* Duncan Grinnell-Milne, 2016-11-11 Duncan Grinnell-Milne was one of that select band of young men who made history in the air between 1915 and 1918 when they learned to fly in machines that resembled box-kites and laid the foundations of aerial combat which future generations would follow. He became a flying ace, with six confirmed aerial victories, and he spent two years as a prisoner of war before escaping from German captivity to fly and fight again. He took part in the great aerial offensive of 1918 which contributed to the winning of the war. His story of the war in the air is one of the most exciting accounts by a pilot of the Royal Flying Corps it is also one of the best written and, ninety years after it was first published, it is a classic of its kind. Endorsements ..'We have no hesitation in ranking it with the very best of the war books.' Daily Telegraph'Wind in the Wires is a war book in class by itself. From beginning to end the book a lure to read outstanding.' Flight'An addition to the number of books about flying needs more excuse than the mere subject of air fighting. This book is excused by the charm of the author's style, by his judgement in pruning his story, and by the interest which his own personality arouses.' Manchester Guardian'The most beautiful air book that has yet appeared.' Birmingham Post'The most interesting and attractive quality of the book is the fact that it gives a graphic account of the fledgling days of wartime flying. When the time comes for the great writer of the future to compose a comprehensive narrative of the war, this is one of the books that

will help him acquire a true perspective.' Nottingham Guardian

wind in german language: Let the Wind Speak Carol Shloss, 2023-02-21 Carol Loeb Shloss creates a compelling portrait of a complex relationship of a daughter and her literary-giant father: Ezra Pound and Mary de Rachewiltz, Pound's child by his long-time mistress, the violinist Olga Rudge. Brought into the world in secret and hidden in the Italian Alps at birth, Mary was raised by German peasant farmers, had Italian identity papers, a German-speaking upbringing, Austrian loyalties common to the area and, perforce, a fascist education. For years, de Rachewiltz had no idea that Pound and Rudge, the benefactors who would sporadically appear, were her father and mother. Gradually the truth of her parentage was revealed, and with it the knowledge that Dorothy Shakespear, and not Olga, was Pound's actual wife. Dorothy, in turn, kept her own secrets: while Pound signed the birth certificate of her son, Omar, and claimed legal paternity, he was not the boy's biological father. Two lies, established at the birth of these children, created a dynamic antagonism that lasted for generations. Pound maneuvered through it until he was arrested for treason after World War II and shipped back from Italy to the United States, where he was institutionalized rather than imprisoned. As an adult, de Rachewiltz took on the task of claiming a contested heritage and securing her father's literary legacy in the face of a legal system that failed to recognize her legitimacy. Born on different continents, separated by nationality, related by natural birth, and torn apart by conflict between Italy and America, Mary and Ezra Pound found a way to live out their deep and abiding love for one another. *Let the Wind Speak* is both a history of modern writers who were forced to negotiate allegiances to one another and to their adopted countries in a time of mortal conflict, and the story of Mary de Rachewiltz's navigation through issues of personal identity amid the shifting politics of western nations in peace and war. It is a masterful biography that asks us to consider cultures of secrecy, frayed allegiances, and the boundaries that define nations, families, and politics.

wind in german language: Herta Müller Brigid Haines, Lyn Marven, 2013-06-20 This volume is a critical companion to the works of Herta Müller, winner of the Nobel Prize in Literature in 2009. Müller (1953-) is a Romanian-German novelist, essayist and producer of collages whose work has been compared with that of W.G. Sebald and Franz Kafka. The Nobel Committee described her as a writer 'who, with the concentration of poetry and the frankness of prose, depicts the landscape of the dispossessed'. In works such as *Niederungen* (Nadirs), *Herztier* (The Land of Green Plums), *Reisende auf einem Bein* (Traveling on One Leg), and *Atemschaukel* (The Hunger Angel), all written in German but translated worldwide, Müller addresses vital contemporary issues such as dictatorship, migration, memory, and the ongoing legacy of fascist and communist rule in Europe. Her works are written in a rich, poetic language which imbues them with great power and depth. They exceed national boundaries and have universal appeal; they speak to a global audience attuned

to political oppression and its lasting effects. This volume, containing contributions by an international team of scholars, introduces the work of one of Europe's foremost contemporary writers to a world audience. Individual chapters deal with Müller's major works and her volumes of collages. Other chapters explore her poetics and the Romanian background as well as themes, such as gender and life writing, running throughout her work, and her worldwide reception through the media and the medium of translation.
