wilmington hospital adult medicine: Basics In Adolescent Medicine: A Practical Manual Of Signs, Symptoms And Solutions Tomas Silber, Harshita Saxena, 2014-03-21 This practical manual reviews salient topics in Adolescent Medicine. The volume is practitioner-centered, focusing on the symptoms that bring a teenager to the clinician. Every chapter begins with a very brief clinical vignette, highlighting the patient's chief complaint or primary issue of concern. The handbook is divided into five primary sections: (1) Well Adolescent Care to include chapters such as the Annual Physical and Immunizations in Adolescence; (2) Common Problems of Adolescence such as Acne and Low Back Pain; (3) Reproductive Health Care issues such as Menstrual Disorders and Teen Pregnancy/Options Counseling; (4) Urgent Care matters including Acute Chest Pain and Scrotal Pathology: Pain and Masses; and finally, (5) Special Considerations to include chapters such as Cyberbullying and Sexting and Tobacco Use and Cessation Counseling. Chapters follow a uniform format with vignette as described above, followed by multiple choice questions designed to test the readers knowledge. Salient features related to the chapter topic follow, including relevant clinical "pearls" such as history, physical exam, laboratory and diagnostic studies and treatment strategies. For each chapter, issues that are unique to managing illness in adolescents are highlighted to distinguish them from adults and younger children. When applicable, a broad differential diagnosis is provided to help guide the reader. Easy to read tables are included to highlight and clearly summarize key aspects of the topic and the chapters end with answers to the Board-Style questions presented at the start.

wilmington hospital adult medicine: Human Trafficking: A Global Health Emergency

Mary de Chesnay, Donna Sabella, 2023-08-30 This book presents various forms of human trafficking, a growing trend in the exploitation of large numbers of people with concurrent public health, socio-cultural, and economic costs to countries burdened with the consequences of the COVID-19 pandemic. Edited by psychiatric-mental health nurses and an applied anthropologist, this volume covers all forms of human trafficking: sex trafficking, forced labor, forced marriage, baby trafficking, organ trafficking, child marriage, and child soldiers with a global public health and policy focus. As such, it fills a gap in human trafficking knowledge and is built on courses springing up around the United States in multiple disciplines. Medical, mental health, and social work interventions are included as well as information about programs with documented outcomes. Each chapter includes state of the art of knowledge with case studies illustrating specific focal ideas, discussion, questions and exercises in order to help readers retain and reinforce chapter material. This textbook will be useful in the disciplines of nursing, medicine, public health, social work, and policy making, as well as in disciplines in which human trafficking is a current interest, such as law, criminal justice, and education.

wilmington hospital adult medicine: *Medical Perspectives on Human Trafficking in*

Adolescents Kanani E. Titchen, Elizabeth Miller, 2020-07-01 Human trafficking is an increasingly large issue in medicine, particularly for the adolescent population. The pubertal and neurologic development of early- and mid-adolescence may serves as a foothold for trauma bonds and human trafficking. To date, there are few case studies of human trafficking in the medical literature. More often, these cases are missed, and human trafficking patients are unlikely to disclose their victimization to their physicians for multiple reasons. As a result, physicians fail to ask key questions and fail to notice important red flags for human trafficking. Research shows that this is primarily due to a lack of medical training and awareness and a resultant denial on the part of many physicians that victims of human trafficking present to their clinics or specialties./div This book provides clinicians with a case-based guide to scenarios they may encounter in their practice that involve human trafficking. These cases include those involving sex trafficking and labor trafficking; male and female and transgender victims; victims from a range of racial, ethnic, geographic and socioeconomic backgrounds; as well as presentations of adolescent and young adult victims to fields such as adolescent medicine, general pediatrics, neonatology, rheumatology, transplant medicine, and obstetrics-gynecology, in addition to the stereotypical presentations to emergency departments. Each case is followed by a discussion that highlights key aspects of human trafficking in adolescent and young adult patients. These discussions also reference the growing body of research on human trafficking, orient the reader to medico-legal aspects of reporting human trafficking in the adolescent and young adult populations, and feature useful questions, exercises, and resources to promote discussion among those medical professionals who interact with adolescent medicine and young adult patients. Written by physicians, legal advocates and lawyers, *Medical Perspectives on Human Trafficking in Adolescents* is the definitive guide for all clinicians who care for adolescent patients. It is also a useful resource for mental health professionals and social workers.
