windsor historical society windsor ct: Eighteen Hundred and Froze to Death John V H Dippel, 2015-04-01 Almost 200 years ago the Northeast endured a dramatic, devastating series of cold spells, destroying crops, forcing thousand to migrate west, and causing many to wonder if their assumptions about a world governed by a beneficial Providence were valid. The so-called year without a summer also exposed weaknesses in political and theological authorities, spurring a trend toward scientific inquiry and greater democracy. An endangered New England agriculture gave

impetus to that region's manufacturing sector. The alarming threat to existence in that part of the country (as well as most of Western Europe) thus helped usher in the modern era. This book is written with the parallels between 1816 and our current climate change in mind: it introduces informed non-specialists to the myriad of social, psychological, political, demographic, and economic consequences which can be brought about by abrupt change. A major meteorological event profoundly affected our nation's development in 1816. This book shows how this weather phenomenon acted as an accelerator of trends which were just emerging in the early 19th-century - toward greater democracy and the spread of information; settlement of the Western frontier; use of the scientific method to investigate and understand natural phenomena; questioning of long-held religious beliefs as a result of increased knowledge; and industrialization as the means to expand the scope and wealth of the United States. Like all my books, America's First Climate Crisis is written in an accessible, engaging style, using anecdotes and thumbnail sketches to evoke the mood and important personalities of the day. While thoroughly researched, the book avoids the pitfall of academic writing by appealing to the curiosity of intelligent readers who may be put off by uninspired or technical language. The book is organized around various consequences of the disastrous harvests of 1816: after outlining the nature and scope of this calamity, I describe how it brought about a massive exodus to the Ohio Valley and shift in political and economic might to that region; how it undermined the once-unquestioned authority of New England's Federalist establishment; how it gave greater credence to scientific explanations for weather events and disasters; how it compelled New England merchants to abandon their opposition to manufacturing; and how it helped create a modern awareness of humanity's place in the universe.

Delve into the surprising history of the region's most iconic crop, all the way back to early Native American uses and the boom of the Civil War. Though fashionable in the 1950s, the popularity of cigars declined a decade later, nearly destroying the region's tobacco industry. A resurgence in the 1990s brought new life to the crop, and the reopening of Cuba in 2015 added a new chapter for cigar tobacco. Brianna Dunlap, director of the Connecticut Valley Tobacco Museum, provides a guide to important tobacco landmarks from East Haddam to Brattleboro, featuring stunning photography from Leonard Hellerman. windsor historical society windsor ct: Windsor Locks Leslie Matthews Stansfield, 2003

Transportation has always played an important role in Windsor Locks, a Connecticut River town in the north central part of the state named for the canal locks built here in 1829. Expansion continued after the arrival of the railroad in the late 1860s; today, the town is an aviation center with an international airport and an important air museum. Windsor Locks explores the one-hundred-fifty-year-old town through vintage images and lively narrative, into which are woven stories of the past drawn from interviews with longtime residents. Interesting historical details include New England's first Christmas tree, created on a local farm when, in the German custom, a Hessian soldier decorated a tree; and the first female governor to be elected in her own right, Ella Grasso, born and raised here.
